Biodiversity Dynamics:

Biodiversity Dynamics Michael L. McKinney, James A. Drake, 2001-04-12 How will patterns of human interaction with the earth's ecosystem impact on biodiversity loss over the long term not in the next ten or even fifty years but on the vast temporal scale be dealt with by earth scientists This volume brings together data from population biology community ecology comparative biology and paleontology to answer this question **Biodiversity Dynamics and Conservation C.**

Lévêque, 1997-05-13 This is a comprehensive book on the biodiversity of one of the most diverse ecosystems known tropical freshwater

On the Origins and Dynamics of Biodiversity: the Role of Chance Alain Pavé, 2010-07-03 Chance is necessary for living systems from the cell to organisms populations communities and ecosystems It is at the heart of their evolution and diversity Long considered contingent on other factors chance both produces random events in the environment and is the product of endogenous mechanisms molecular as well as cellular demographic and ecological This is how living things have been able to diversify themselves and survive on the planet Chance is not something to which Life has been subjected it is quite simply necessary for Life The endogenous mechanisms that bring it about are at once the products and the engines of evolution and they also produce biodiversity These internal mechanisms veritable biological roulettes are analogous to the mechanical devices that bring about physical chance They can be modeled by analogous mathematical equations This opens the way of a global modeling of biodiversity dynamics but we need also to gather quantitative data in both the laboratory setting as well as in the field By examining biodiversity at all scales and all levels this book seeks to evaluate the breadth of our knowledge on this topical subject to propose an integrated look at living things to assess the role of chance in its dynamics in the evolutionary processes and also to imagine practical consequences on the management of living systems

Biodiversity Dynamics Michael L. McKinney, James A. Drake, 2001 How will patterns of human interaction with the earth's ecosystem impact biodiversity loss over the long term not in the next ten or even fifty years but on the vast temporal scale dealt with by earth scientists The contributors to Biodiversity Dynamics bring together the cutting edge findings of a number of different fields that have traditionally had little crossover data from population biology community ecology comparative biology and paleontology are all presented Where paleontologists and ecologists have long had divergent perspectives Biodiversity Dynamics seeks a middle ground finding ways for both scientific communities to work together to comprehend the great biodiversity of the earth and how to preserve it for future generations **Biodiversity :**

Structure and Function - Volume I Wilhelm Barthlott, K. Eduard Linsenmair, Stefan Porembski, 2009-08-19 Biodiversity Structure and Function is a component of Encyclopedia of Environmental and Ecological Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme on Biodiversity Structure and Function discusses matters of great relevance to our world such as Characterization of Biodiversity Biodiversity and Ecosystem Functioning Spatial and Temporal Dimensions of

Biodiversity Dynamics Evolutionary and Genetic Aspects of Biodiversity Biodiversity Monitoring Assessment Data Management and Indicators The Value of Biodiversity Halting Biodiversity Loss Fundamentals and Latest Trends of Conservation Science and Action Application of Ecological Knowledge to Habitat Restoration These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs Biological Diversity L. N. Petrov, 2003 One of the cornerstones of life's wonders is the vast array of species filling the planet From plants to animals to humans there is no shortage of beings to provide spice of life variety is said to be Periodically scientists announce the discovery of a new form of life so it seems as if Earth is capable of producing new species just to keep us on our toes At times the immense breadth of living things can even feel overwhelming as one pauses to ponder how numerically insignificant humans are when compared to the insect population Given the biological diversity of the planet it is incumbent upon humans to safeguard the natural beauty of the environment To that end conservation takes on special importance necessitating the balancing of industrial expansion with preserving the flora and fauna surrounding us This book is an important tool in understanding and researching the many different life forms spanning the globe Collected here is a substantial and carefully selected listing of relevant literature on biological diversity and its conservation Following this bibliography are author title and subject indexes to allow for further access to this information The sheer bulk of the works about biological diversity can be so intimidating that a book such as this one becomes useful in sorting through the resources about the importance of life's variety

Biodiversity Christian Lévêque, Jean-Claude Mounolou, 2004-04-21 The title provides an overview of the current knowledge about the diversity of the living world and the various problems associated with its conservation and sustainable use Covering both the fundamentals of the subject along with the latest research Biodiversity presents key conservation issues within a framework of global case studies Starting with a summary of the concept of biodiversity the text then explores such subjects as species richness ecological systems the consequences of human activities diversity and human health genetic resources biotechnology and conservation Comprehensive introduction to key issues surrounding the study of biodiversity Extensive bibliography and references to numerous relevant websites Introduces current research in the field within a framework of useful case studies **Encyclopedia of Biodiversity**, 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought

a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future

Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

Palaeobiology II Derek E. G. Briggs, Peter R. Crowther, 2008-04-15

Globalistics and Globalization Studies George Modelski., Anton L. Grinin, Valentina M. Bondarenko., Ivan A. Aleshkovski, Alexey I. Andreev, Julia V. Zinkina, Oleg A. Alekseenko, Olga G. Leonova, David Christian, Tatyana L. Shestova, Craig G. Benjamin, Sergey V. Tsirel, William R. Thompson, Kentaro Sakuwa, Mikhail A. Kaverin, Sergey Yu. Malkov, Vladimir Maslov, Stanislav Ye. Bilyuga, Olga I. Davydova, Dmitry S. Malkov., Lowell Gustafson, David Baker, Alexander V. Markov, Joseph Voros, Alexander D. Panov, 2015-01-01

This yearbook is the fourth in the series with the title Globalistics and Globalization Studies The subtitle of the present volume is Global History Big History The point is that today our global world really demands global knowledge Thus there are a few actively developing multidisciplinary

approaches and integral disciplines among which one can name Global Studies Global History and Big History They all provide a connection between the past present and future Big History with its vast and extremely heterogeneous field of research encompasses all the forms of existence and all timescales and brings together constantly updated information from the scientific disciplines and the humanities Global History is transnational or world history which examines history from a global perspective making a wide use of comparative history and of the history of multiple cultures and nations Global Studies express the view of systemic and epistemological unity of global processes Thus one may argue that Global Studies and Globalistics can well be combined with Global History and Big History and such a multi disciplinary approach can open wide horizons for the modern university education as it helps to form a global view of various processes

Islands Peter Vitousek, Lloyd L. Loope, Hennig Adersen, 2013-03-08 Oceanic islands represent a set of systems in which biological diversity varies as a consequence of remoteness or size not environment they are also generally simpler than continental ecosystems Islands therefore provide an opportunity to determine the direct effects of biological diversity on ecosystem function The volume addresses the components of biological diversity on islands and their patterns of variation the modern threats to the maintenance of biological diversity on islands the consequences of island biology and its modification by humanity regarding aspects of ecosystem function the global implications of islands for conservation and how islands can help one to understand the processes inducing changes throughout the world

Treetops at Risk Margaret Lowman, Soubadra Devy, T. Ganesh, 2013-06-22 Forest canopies not only support high terrestrial biodiversity but also represent a critical interface between the atmosphere and the earth They provide goods and services to support diverse human communities and offer opportunities to explore sustainable use of these resources for many generations of local livelihoods Forest canopies are important carbon sequestration units and in this sense serve as climate control for the planet Canopies are important energy production centers for the planet and serve as the basis for many food chains The canopy can also act as a hook for education outreach and conservation inspiring ecotourism through recreation and other sustainable uses such as treetop walks zip lines and birding Despite these critical services provided by forest canopies almost no dedicated research in the treetops was initiated until as recently as the late 1970s when single rope techniques were developed by mountaineering professionals and adapted for use in the canopy Subsequently an array of canopy access tools was designed in the 1980s and early 1990s that have opened up this eighth continent for global exploration and discovery This volume uses the major findings of the 5th international canopy conference as a platform for organization but it does not mimic the sessions and presentations of the conference itself Instead it builds on the important themes that emerged from the conference and solicits articles that represent future priorities and advancements for canopy science in the next decade Despite the global efforts of hundreds of forest scientists over the past 3 decades forests are degrading at an accelerated rate and biodiversity is increasingly threatened by human activities Given these trends despite the very best efforts of the world's best scientists other

approaches must be taken This volume summarizes the issue of treetops at risk and assembles a global authorship to examine past accomplishments and future initiatives critical in forest conservation Environment, Climate, Plant and Vegetation Growth Shah Fahad, Shah Saud, Taufiq Nawaz, Liping Gu, Mushtaq Ahmad, Ruanbao Zhou, 2024-09-26 The book provides currently available information on the changing climate and its impact on functional and adaptive features of plants The book also cover cutting edge research on key determinants of plant growth that provides a direction towards execution of programs and practices that will assist resilience of crop production systems to the changing climate This book will represent the updated scientific information regarding soil and plant productivity under changing climate which will be beneficial to academics and researchers working on climate change agronomy stress physiology biotechnology It provides an in depth discussion on the latest techniques to enhance plant responses to new environmental conditions that can be directly applied on field

Grassland Productivity and Ecosystem Services Gilles Lemaire, 2011 Grassland ecosystems are deeply affected by human activities and need appropriate management to optimise trade offs between ecosystem functions and services Until now they have mainly been analysed as agro ecosystems for animal production but this book looks beyond the role of grassland as a feeding ground and evaluates other important processes such as carbon sequestration in soils greenhouse gas regulation and biodiversity protection This authoritative volume expertly highlights the need for an immediate balance between agriculture and ecological management for sustainability in the future

Ordovician of the World Diego García-Bellido Capdevila, 2011 **Understanding Marine Biodiversity** National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Biological Diversity in Marine Systems, 1995-02-24 The diversity of marine life is being affected dramatically by fishery operations chemical pollution and eutrophication alteration of physical habitat exotic species invasion and effects of other human activities Effective solutions will require an expanded understanding of the patterns and processes that control the diversity of life in the sea Understanding Marine Biodiversity outlines the current state of our knowledge and propose research agenda on marine biological diversity This agenda represents a fundamental change in studying the ocean emphasizing regional research across a range of space and time scales enhancing the interface between taxonomy and ecology and linking oceanographic and ecological approaches Highlighted with examples and brief case studies this volume illustrates the depth and breadth of undescribed marine biodiversity explores critical environmental issues advocates the use of regionally defined model systems and identifies a series of key biodiversity research questions The authors examine the utility of various research approaches theory and modeling retrospective analysis integration of biotic and oceanographic surveys and review recent advances in molecular genetics instrumentation and sampling techniques applicable to the research agenda Throughout the book the critical role of taxonomy is emphasized Informative to the scientist and accessible to the policymaker Understanding Marine Biodiversity will be of specific interest to marine biologists ecologists oceanographers

and research administrators and to government agencies responsible for utilizing managing and protecting the oceans

Marine Macroecology Jon D. Witman, Kaustuv Roy, 2009-10-15 Pioneered in the late 1980s the concept of macroecology a framework for studying ecological communities with a focus on patterns and processes revolutionized the field Although this approach has been applied mainly to terrestrial ecosystems there is increasing interest in quantifying macroecological patterns in the sea and understanding the processes that generate them Taking stock of the current work in the field and advocating a research agenda for the decades ahead Marine Macroecology draws together insights and approaches from a diverse group of scientists to show how marine ecology can benefit from the adoption of macroecological approaches Divided into three parts Marine Macroecology first provides an overview of marine diversity patterns and offers case studies of specific habitats and taxonomic groups In the second part contributors focus on process based explanations for marine ecological patterns The third part presents new approaches to understanding processes driving the macroecological patterns in the sea Uniting unique insights from different perspectives with the common goal of identifying and understanding large scale biodiversity patterns Marine Macroecology will inspire the next wave of marine ecologists to approach their research from a macroecological perspective

Historical Ecology Guillaume Decocq, 2022-10-11 This book addresses present day landscapes ecosystem functioning and biodiversity as legacies of the past It implements an interdisciplinary approach to understand how natural or human impacted ecological systems have changed over time Historical Ecology combines theory methods regional case studies and syntheses to provide a complete up to date overview of historical ecology Beginning with the crucial role of time and inference from observed patterns the book critically reviews the main methodological approaches including monitoring of permanent plots analysis of old maps repeat photography remote sensing soil analysis charcoal analysis botanical indicators and combinations of these methods applied to forest ecosystems A series of case studies from various biomes shows how historical ecology can help in understanding today's socio ecosystems such as mainland and island forests orchards tundra and coastal dunes The book concludes by showing how historical ecology can answer timely fundamental research questions and provide science based evidence for landscape and ecosystem management
