Biographies of Scientific Objects Lorraine Daston, 2000 **Biographies of Scientific Objects** Lorraine Daston, 2000-06-15 Why does an object or phenomenon become the subject of scientific inquiry Why do some of these objects remain provocative while others fade from center stage And why do objects sometimes return as the focus of research long after they were once abandoned Addressing such questions *Biographies of Scientific Objects* is about how whole domains of phenomena dreams atoms monsters culture society mortality centers of gravity value cytoplasmic particles the self tuberculosis come into being and sometimes pass away as objects of scientific study With examples drawn from both the natural and social sciences and ranging from the sixteenth to the twentieth centuries this book explores the ways in which scientific objects are both real and historical Whether discovered or invented these objects of inquiry broaden and deepen in meaning growing more real as they become entangled in webs of cultural significance material practices and theoretical derivations Thus their biographies will matter to anyone concerned with the formation of scientific knowledge Contributors are Jed Z Buchwald Lorraine Daston Rivka Feldhay Jan Goldstein Gerard Jorland Doris Kauffman Bruno Latour Theodore M Porter Hans J rg Rheinberger Marshall Sahlins and Peter Wagner **Perspectives on Chemical Biography in the 21st Century** Isabel Malaquias, Peter J. T. Morris, 2019-01-14 Overlooked even despised by historians of chemistry for many years the genre of biography has enjoyed a revival since the beginning of this century The key to its renaissance is the use of the biographical form to provide a contextual analysis of important themes in contrast to the uncritical almost hagiographic lives of chemists written in the earlier part of the twentieth century Bringing together the contributions of scholars active in several different countries *Perspectives on Chemical Biography in the 21st Century* leads the reader through emerging questions around sources and the generic problems faced by authors of biographies before moving on to discuss aspects more related with physical theoretical and inorganic chemistry and facets of 19th century chemistry In contrast to the letters and diaries of earlier chemists we are now faced with scientists who communicate by telephone and email and compose their documents on computers Are we facing a modern equivalent of the destruction of the Library of Alexandria where all our sources are wiped out electronically *Biographies in the History of Physics* Christian Forstner, Mark Walker, 2020-07-22 This book sheds new light on the biographical approach in the history of physics by including the biographies of scientific objects institutions and concepts What is a biography Can biographies also be written for non human subjects like scientific instruments institutions or concepts The respective chapters of this book discuss these controversial questions using examples from the history of physics By approaching biography as metaphor it transcends the boundaries between various

perspectives on the history of physics and enriches our grasp of the past **Between Nature And Society: Biographies Of Materials** Bernadette Bensaude-vincent, 2022-04-14 This volume opens the readers eyes to the central role of materials in human societies and in the environment by telling the life stories of fifteen materials In this rich collection of stories materials are found at the complex interface between nature and society They are not just atomic structures with a set of properties and behaviors They capture the attention of nations worldwide because materials have major impacts on our welfare and can affect international peace and security Handbook for the Historiography of Science Mauro L. Condé, Marlon Salomon, 2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science *Birds of empire, birds of nation : a history of science, economy, and conservation in United States-Colombia relations* Quintero Toro, Camilo, 2012-09-01 This book reveals the history behind the trade of Colombian birds as a means of comprehending the scientific economic and environmental relations between the United States and Colombia from the 1880s to the 1960s Through the study of the feather trade scientific expeditions scientific communities and nature conservation the author brings to light how international relations and national agendas shaped the study and perception of nature in both countries during those years **The Genealogy of a Gene** Myles W. Jackson, 2015-02-20 The history of the CCR5 gene as a lens through which to view such issues as intellectual property Big Pharma personalized medicine and race and genomics In *The Genealogy of a Gene* Myles Jackson uses the story of the CCR5 gene to investigate the interrelationships among science technology and society Mapping the varied genealogy of CCR5 intellectual property natural selection Big and Small Pharma human diversity studies personalized medicine ancestry studies and race and genomics Jackson links a myriad of diverse topics The history of CCR5 from the 1990s to the present offers a vivid illustration of how intellectual property law has changed the conduct and content of scientific knowledge and the social political and ethical implications of such a

transformation The CCR5 gene began as a small sequence of DNA became a patented product of a corporation and then when it was found to be an AIDS virus co receptor with a key role in the immune system it became part of the biomedical research world and a potential moneymaker for the pharmaceutical industry When it was further discovered that a mutation of the gene found in certain populations conferred near immunity to the AIDS virus questions about race and genetics arose Jackson describes these developments in the context of larger issues including the rise of biocapitalism the patentability of products of nature the difference between U S and European patenting approaches and the relevance of race and ethnicity to medical research

Representing Electrons Theodore Arabatzis, 2006 Both a history and a metahistory *Representing Electrons* focuses on the development of various theoretical representations of electrons from the late 1890s to 1925 and the methodological problems associated with writing about unobservable scientific entities Using the electron or rather its representation as a historical actor Theodore Arabatzis illustrates the emergence and gradual consolidation of its representation in physics its career throughout old quantum theory and its appropriation and reinterpretation by chemists As Arabatzis develops this novel biographical approach he portrays scientific representations as partly autonomous agents with lives of their own Furthermore he argues that the considerable variance in the representation of the electron does not undermine its stable identity or existence Raising philosophical issues of contentious debate in the history and philosophy of science namely scientific realism and meaning change Arabatzis addresses the history of the electron across disciplines integrating historical narrative with philosophical analysis in a book that will be a touchstone for historians and philosophers of science and scientists alike
