Biological Bond:

Hydrogen Bonding in Biological Structures George A. Jeffrey, Wolfram Saenger, 2012-12-06 Hydrogen bonds are weak attractions with a binding strength less than one tenth that of a normal covalent bond However hydrogen bonds are of extraordinary importance without them all wooden structures would collapse cement would crumble oceans would vaporize and all living things would disintegrate into random dispersions of inert matter Hydrogen Bonding in Biological Structures is informative and eminently usable It is in a sense a Rosetta stone that unlocks a wealth of information from the language of crystallography and makes it accessible to all scientists From a book review of Kenneth M Harmon Science 1992

Biological and Biomedical Coatings Handbook Sam Zhang, 2011-05-24 Written in a versatile contemporary style that will benefit both novice and expert alike Biological and Biomedical Coatings Handbook Two Volume Set covers the state of the art in the development and implementation of advanced thin films and coatings in the biological field Consisting of two volumes Processing and Characterization and Application *The Weak Hydrogen Bond* Gautam R. Desiraju, Thomas Steiner, 2001 The weak or non conventional hydrogen bond has been subject of intense scrutiny over recent years in several fields in particular in structural chemistry structural biology and also in the pharmaceutical sciences There is today a large body of experimental and theoretical evidence confirming that hydrogen bonds like C H O N H π C H π and even bonds like O H metal play distinctive roles in molecular recognition guiding molecular association and in determining molecular and supramolecular architectures The relevant compound classes include organometallic complexes organic and bio organic systems and also DNA and proteins The book provides a comprehensive assessment of this interaction type and is of interest to all those interested in structural and supramolecular science including fields as crystal engineering and drug design
