Biological Calcification Cellular And Molecular Aspects Cellular And Molecular Aspects:

Biological Calcification: Cellular and Molecular Aspects Harald Schraer, 2012-12-06 The deposition of calcium containing salts is a widespread phenomenon in both the plant and animal kingdoms Its occurrence suggests a generalized biological adaptation to environments rich in calcium Indeed the Archaean ocean was rich in calcium carbonate and traces of ancient organisms have been found in lime stones estimated to be about 2 7 billion years old The fundamental nature of biological calcification makes it a subject of interest not only to the student of calcium metabolism and skeletal physiology but also to biologists in general As in many areas of biological science recent progress in this field has been rapid and no attempt was made here to cover all the biological systems in which calcification is an important facet of the organisms method of operation Calcification is approached in this volume at the levels of the cellular sites and molecular mechanisms that are involved in this process The ultrastructural and chemical features of the cells and their products which are associated with calcification are emphasized in several chapters The editor in inviting contributions from authors intended that collectively the chapters should convey a sense of the ubiquitous and essential nature of the role of calcification in several phyla of the plant and animal kingdoms The researchers were biochemists physical chemists cell biologists and physiologists some represented medicine and dentistry all were interested in calcification

Biological calcification, 1970 *Biological Calcification* Ermanno Bonucci, 2007-02-17 This book follows a precursor volume devoted to biological calcification edited by the CRC Press Boca Raton Florida in 1992 Several basic aspects of the calcification process were analyzed in it by outstanding authors who had unquestioned competence in their respective research areas Its main aim was that of giving readers access to a series of papers which even though they discussed divergent aspects of biological calcifications drawn from the study of systems as different as vertebrate skeletons and mollusks in vitro cultures and unicellular organisms ectopic calcification and urinary stones provided elements permitting a coherent approach to a comprehensive view of the calcification process in biological tissues Now almost 15 years after the publication of that book a great variety of new data from a wide spectrum of biological organisms and systems has enriched our knowledge of the normal and pathological mechanisms which can lead to calcification Even so this whole process is still problematic the new knowledge concepts and ideas have often suggested that a definitive solution was close at hand but the local mechanism through which the inorganic substance is laid down in organic matrices continues to be an elusive largely enigmatic topic

Collected Works of Shinya Inou Shinya Inou, 2008 This book collects the publications of Shinya Inou pioneering cell biophysicist and winner of the 2003 International Prize for Biology The articles cover the discovery and elucidate the behavior in living cells of the dynamic molecular filaments which organize the cell and play a central role in cell division Other articles report on the development of microscopes especially those using polarized light and digital image enhancement which make possible studies of the ever changing molecular architecture directly in living cells This book also contains many high quality photo

micrographs as well as an appended DVD with an extensive collection of video movies of active living cells After training in Tokyo and at Princeton University Dr Inou has held teaching positions at the University of Washington Tokyo Metropolitan University University of Rochester Dartmouth Medical School and University of Pennsylvania He is a member of the U S National Academy of Sciences and currently holds the title of Distinguished Scientist at the Marine Biological Laboratory in Woods Hole Massachusetts

Calcification in Biological Systems Ermanno Bonucci, 2020-07-24 *Calcification in Biological Systems* provides a collection of up to date papers regarding calcification in a variety of biological systems The papers are not simple reviews of the literature Each paper reflects the personal experience of the author s and is rich in constructive criticism and suggestions Topics range from basic molecular processes to general structural problems in systems as different as unicellular organisms and human skeletal tissues Because calcification is so diffuse in the animal kingdom this book makes no attempt to achieve a conclusive synthesis of available results and current ideas Instead its merit lies in its ability to be useful to investigators with different scientific backgrounds and areas of interest
