Lacher, Janet Barletta, Jeffery P. Hughes, 2012 Objective Biological variation consists of between person BP and within person WP variation Estimates of WP coefficients of variation CV_w and BP coefficients of variation CV_g for hematology laboratory tests were estimated from the 1999 2002 National Health and Nutrition Examination Survey NHANES Methods NHANES is a survey of the civilian noninstitutionalized U S population that uses a stratified multistage probability design Between and within person variations were estimated for 18 hematology tests For WP variation a nonrandom sample was obtained with a median of 17 days between two test measurements Between person variation was estimated from the WP sample and additional participants were matched for age group gender and race and ethnicity to the WP sample Results The BP and WP variations were estimated on as many as 2 496 and 852 sample participants respectively Mean corpuscular hemoglobin concentration had the lowest CV_g 2 25% for men and 2 40% for women and mean corpuscular volume had the lowest CV_w 0 31% for men and 0 37% for women The index of individuality CV_w CV_g ranged from 0 06 for mean corpuscular volume for men and women to 0 62 for segmented neutrophil number for men and 0 55 for segmented neutrophil percent for women Women had higher CV_w compared with men for hematocrit hemoglobin mean corpuscular volume red blood cell count and
