Biological Applications Of Liquid Scintillation Counting:

Biological Applications of Liquid Scintillation Counting Yutaka Kobayashi, 2012-12-02 Biological Applications of Liquid Scintillation Counting based on a series of lectures given at the Worcester Foundation for Experimental Biology discusses the various biological applications of liquid scintillation counting and presents its principles in a manner that is simple practical and useful This book explains the fundamentals of scintillators and the scintillation process from sample preparation to testing and setting up a counter and the application of radiotracers This text is organized into six chapters and begins with a historical overview of liquid scintillation counting emphasizing two major events that stimulated its development the discovery of organic compounds called scintillators and the introduction of photomultiplier tubes This book considers the factors that affect the performance of photomultiplier tubes including temperature and magnetic fields and the use of liquid scintillation counting to measure radioactivity The discussion then shifts to the factors that must be taken into account when choosing a method for preparing samples including the physical and chemical characteristics of the sample the isotope or isotopes of the sample and the anticipated level of radioactivity The following chapters look at the general considerations when installing a liquid scintillation counter procedures for applying radiotracers and practical aspects of sample preparation This book is intended for physicists and experimental biologists

Biological Applications of Liquid Scintillation Counting Yutaka Kobayashi, David V. Maudsley, 1974 **Radiochemistry** G W A Newton, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 90 years The Royal Society of chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

Scintillation Counting Recent Applications and Development Volume II Sample Preparation and Applications documents the proceedings of the International Conference on Liquid Scintillation Counting Recent Applications and Development held on August 21-24, 1979 at the University of California San Francisco. The conference brought together 180 scientists from 15 countries who share a common interest in promoting a better understanding of liquid scintillation science and technology. Liquid scintillation counting is one branch of nuclear metrology that many scientists of various disciplines use in tracing and quantification in their investigatory studies. The proceedings, consisting of 14 sections, include 76 of the 77 invited and contributed papers presented at the conference. The first volume contains 37 papers mainly dealing with the physical aspects of liquid scintillation science and technology. The present volume contains papers that cover sample preparation, flow counting, and emulsion sol-gel counting. It also includes studies on applications of liquid scintillation counting such as chemiluminescence and bioluminescence, environmental monitoring, and biomedical and radioimmunoassays. *Biologic Applications of Radiotracers* Howard J. Glenn, 2019-08-14. First published in 1982. This present volume presents an excellent amount of animal models in radiotracer investigations, describes the animal radiopharmacology laboratory, and discusses radiotracer distribution differences between species. *Instrumentation Between Science, State and Industry* B. Joerges, T. Shinn, 2012-12-06. In this book, we appropriate their conception of research technology and extend it to many other phenomena which are less stable and less localized in time and space than the Zeeman-Cotton situation. In the following pages, we use the concept for instances where research activities are orientated primarily toward technologies which facilitate both the production of scientific knowledge and the production of other goods. In particular, we use the term for instances where instruments and methods traverse numerous geographic and institutional boundaries that is, fields distinctly different and distant from the instruments and methods' initial focus. We suggest that instruments such as the ultracentrifuge and the trajectories of the men who devise such artefacts diverge in an interesting way from other forms of artefacts and careers in science, metrology, and engineering with which students of science and technology are more familiar. The instrument systems developed by research technologists strike us as especially general, open-ended, and flexible. When tailored effectively, research technology instruments potentially fit into many niches and serve a host of unrelated applications. Their multi-functional character distinguishes them from many other devices which are designed to address specific narrowly defined problems in a circumscribed arena, in and outside of science. Research technology activities link universities, industry, public and private research or metrology establishments, instrument-making firms, consulting companies, the military, and metrological agencies. Research technology practitioners do not follow the career path of the traditional academic or engineering professional. *Liquid Scintillation Counting and Organic Scintillators* Harley Ross, 1991-04-01. Proceedings of the 1989 international conference. This book is excellent coverage of new trends and established methods in the field of liquid scintillation counting and organic scintillators. Any scientist working with scintillators will find this book
