Biological Techniques:

Biological Techniques P.R. Yadav, 2006 The present title *Biological Techniques* has been written for undergraduate postgraduate students opting biological pathological biochemistry biotechnology courses It deals with the various types of fixatives stains and techniques used in the fields just stated It is basically a simple cookery book but like all good cookery books this volume should remain on the bench until its useful life is over and should never become embedded in the library shelf This book aims at an explanation of the process involved in the preparation of tissues for microscopical study The object throughout has been to get away from the empirical and rule of thumb methods that have so long held away in the field of microtechniques and to replace them so far as possible by methods based on actual understanding of the process involved in terms of chemistry and physics

Eco-friendly Agro-biological Techniques for Enhancing Crop Productivity Rakesh Singh Sengar, Ashu Singh, 2018-03-13 As the world population is exploding and alongside fluctuations in climate is also prevalent there is an increasing stress on the food requirements of the population We have an urgent necessity to produce more food in the limited agricultural land Further to feed 7 billion people there is a requirement of high yielding crops without harming environment and limiting the use of unnecessary pesticide and chemical fertilizers Therefore it has become crucial to develop agri bio techniques which are environment friendly and also give high crop productivity Many countries are evaluating the utility of biotechnology and its role in addressing problems of food security and poverty Biotechnology is the application of scientific and engineering principles to the processing and production of materials by utilising biological agents These agents are exploited to provide goods and services Agricultural biotechnology encompasses a growing list of techniques that range from simple probes to determine a relevant gene from the complete genome to manipulating genes for a desired outcome Many other popular methods used in the realm of agricultural technology are gene integration Marker assisted breeding Tissue culture Gene profiling or association mapping Metabolomics etc The fundamental challenge facing the scientific community is how to devise innovative strategies that will bring all developed as well as developing countries into the biological fold and to do so in ways that will take full advantage of advances in the biological sciences to curb poverty improve public health and promote human development This book contains information on eco friendly techniques for high crop productivity and it is a myriad of different techniques and technology used to sustain productivity in crop plants There are fewer books focusing on large scale organic farming molecular farming etc Multidisciplinary research and literature is needed to deliver knowledge and products into the marketplace which fulfil these requirements The present book is a collection of literature contributed by experts scientists professors and researchers from around the world it emphasizes work of concerned scientist and his choice of techniques used for enhancement of agricultural production This book analyses the use of modern techniques to increase crop yields production and risk of hunger linked to socioeconomic scenarios
