Biology And Evolution Of Australian Lizards:

The Biology and Evolution of Australian Lizards Allen E. Greer, 1989 **The Biology and Evolution of Australian Lizards** Allen E. Greer, 1990-04 Australian Lizards Stephen K. Wilson, 2012 The extraordinary lives of lizards remain largely hidden from human eyes Lizards feed, mate, lay eggs or give live birth and carefully manage their temperatures They struggle to survive in a complex world of predators and competitors The nearly 700 named Australian species are divided into seven families the dragons monitors skinks flap footed lizards and three families of geckos Using a vast array of artful strategies lizards have managed to find a home in virtually all terrestrial habitats Australian Lizards A Natural History takes the reader on a journey through the remarkable life of lizards It explores the places in which they live and what they eat shows how they make use of their senses and how they control their temperatures how they reproduce and how they defend themselves Lavishly illustrated with more than 400 color photographs this book reveals behavioral aspects never before published offering a fascinating glimpse into the unseen lives of these reptiles It will appeal to a diverse readership from those with a general interest in natural history to the seasoned herpetologist **Reptiles and Amphibians of Australia** Harold Cogger, 2018-10-01 Reptiles and Amphibians of Australia is a complete guide to Australia's rich and varied herpetofauna including frogs crocodiles turtles tortoises lizards and snakes For each of the 1218 species there is a description of its appearance distribution and habits These descriptions are also accompanied by distribution maps and in many cases one of the book's more than 1000 colour photographs of living animals The book also includes 130 simple to use dichotomous keys accompanied by hundreds of explanatory drawings that in most cases allow a specimen in hand to be identified In addition it has a comprehensive list of scientific references for those wishing to conduct more in depth research an extensive glossary and basic guides to the collection preservation and captive care of specimens This classic work was originally published in 1975 The updated seventh edition contains a new Appendix that discusses recent changes and lists over 80 new or resurrected species and genera that have been added to the Australian frog and reptile fauna since the 2014 edition **Field Guide to the Reptiles of the Northern Territory** Chris Jolly, Brendan Schembri, Stewart Macdonald, 2023-06 A land of extremes the Northern Territory's arid deserts and monsoonal forests harbour some of Australia's smallest and the world's largest reptiles as well as some of the world's most venomous snakes Field Guide to the Reptiles of the Northern Territory is the first regional guide to the crocodiles turtles lizards and snakes of this megadiverse region It presents introductions to order family and genus keys to family genus and species and species profiles including descriptions photos distribution maps and notes on natural history It features profiles for the 390 species that occur or may occur on the land and in the sea of the Northern Territory Extensively illustrated this is an essential resource for wildlife enthusiasts and professional and amateur herpetologists **Evolutionary Biology** Max K. Hecht, Ross J. MacIntyre, Michael T. Clegg, 2012-12-06 After volume 33 this book series was replaced by the journal Evolutionary Biology Please visit www

springer.com 11692 for further information This volume continues bringing to readers the findings of eminent evolutionary biologists and paleobiologists Among the topics discussed in this book are the origin of the dermal skeleton in conodont chordates patterns of nucleotide substitution and codon usage in plasmid DNA evolution a model to explain phenotype stability in functional systems and inter island speciation of Hawaiian biota

The Natural History of Sydney Daniel Lunney, Pat Hutchings, Dieter Hochuli, 2009-09-01 On 3 November 2007 the Royal Zoological Society of NSW held its annual forum with the topic being The natural history of Sydney It has remained as the title of this book The program contained the following introduction as the theme of the forum and it has remained as the theme for this book Sydney has a unique natural history providing a home for iconic animals and plants while remaining a global city It captured the imagination of prominent naturalists and inspired visits and collecting trips to the infant colony of New South Wales in the late 1790s and early to late 1800s From these collections flowed great descriptive works detailing the new and unusual animals and plants of the antipodes Gould Owen Huxley Peron Banks and many others recounted new and evocative flora and fauna Many collecting trips for the great museums and institutions in Europe began in Sydney Sydney still continues to engage naturalists and those grappling with the current drama of climate change and conservation The Royal Zoological Society of New South Wales founded in Sydney in 1879 is a product of the grand 19th century tradition of natural history with a particular emphasis on animal life Sydney is also home to some of Australia's oldest and finest institutions such as the Australian Museum the University of Sydney and the Royal Botanic Gardens Throughout Sydney there are places where the natural habitat has not been supplanted by urban growth and the interest in Sydney's endemic flora and fauna remains strong This forum draws on a magnificent interdisciplinary vision while continuing to employ all the modern tools in the investigation and communication of Sydney's natural history It reflects a resurgence in local history and pursues the natural history of our harbour side city in a modern framework The day of the forum was a captivating display of the diversity of the fauna of Sydney both native and introduced and its varied habitats and of the diverse ways of appreciating natural history including the history of natural history Also on display was the depth of scholarship lying behind each of the presentations The subject clearly has a profound hold on many professional biologists historians and those keen to conserve their local area but if the day is any guide there are vastly more people living in or visiting Sydney who have more than a passing interest in this topic The subject matter ranged from the history of institutions engaged in natural history through animal groups as diverse as reptiles and cicadas to ideas on how to see Sydney as a natural setting Other papers dealt with the use by Aboriginal people of the native biota in terms of fishing and being displayed in rock paintings before the arrival of the colonists There is little doubt that this theme could run to 10 volumes not just this one but the diversity of ideas skills and organisms displayed in this one book will serve as a guide to what lies beyond these pages A considerable effort was made by each author to present their material as both interesting and accurate The material is built on lifetimes of sustained effort to study record and communicate findings and

ideas It is also built on the lifetime work of our predecessors who laboured to find and record the natural history of Sydney We are indebted to their efforts This book records not only the outcome of a successful day of presentations but more importantly the lifelong scholarship of those authors in each of the specialist fields Not only have the authors been absorbed by documenting the biodiversity they have included studies or intelligent speculation on the factors which have impacted on this diversity since Cook sailed along the NSW coast in 1770 The Macquarie Dictionary e g the revised third edition defines natural history as the science or study dealing with all objects in nature and the aggregate of knowledge connected with such knowledge This makes natural history of wide interest to the entire community of Sydney both residents and visitors However we have specialised to the extent that we have focused principally on fauna the RZS being a zoological society Nevertheless plant communities are recognised as part and parcel of the natural history of Sydney as is a sense of the geography of the city with its magnificent harbour sandstone backdrop and spectacular national parks surrounding the city Also of great importance is how others in the past have seen the natural history of what is now called Sydney All these ideas are captured in this book One of the strengths of being a naturalist i e one who is versed in or devoted to natural history especially a zoologist or botanist Macquarie Dictionary is the opportunity to look across the individual disciplines be it a specialist in birds mammals or polychaetes a taxonomist or an ecologist or writer Their advantage is the ability to see the richness of a place such as Sydney Consequently most botanists and zoologists have one or two highly specialised skills but a keen interest in the broader picture and can thus appreciate the importance of for example cave art or fish diversity in the harbour and recognise that the vertebrate fauna of Sydney has changed over the 222 years since European settlement and no doubt the invertebrate fauna has changed although it is less easily assessed Our aim in this book is to draw attention to the natural history of Sydney for scholars as well as those who have the task of looking after a particular area such as within a local government area or a particular taxon such as reptiles or fish and those who have the opportunity to conserve areas taxa or institutions through their employment or legislative responsibilities It is also for teachers and lecturers colleagues in other cities and towns in Australia and those with a keen interest in managing our urban wildlife our cultural heritage or promoting the profound value of our natural heritage within a city landscape It also displays the importance of museum and herbarium collections in documenting the changes since 1770

On the Ecology of Australia's Arid Zone Hans Lambers, 2018-08-21 This book will appeal to an international audience as well as be irresistible to local readers Anyone working or with an interest in Australia's arid zone should need ready access to this book There is no equivalent publication out there at the moment and this book has many authoritative chapters richly illustrated with colourful material The challenge of this book was to assemble current knowledge on particular topics and concepts and principles relating to them It is also forward looking by identifying where there are gaps or inadequacies in knowledge and where future research needs to be directed Lead authors were encouraged to take such an approach they had the opportunity to involve any author they

considered appropriate The final product should be a fabulous resource also for university courses especially at MSc level

Desert Channels CSIRO Publishing, 2011-05-05 Desert Channels is a book that combines art science and history to explore the impulse to conserve in the distinctive Desert Channels country of south western Queensland The region is the source of Australia's major inland flowing desert rivers Some of Australia's most interesting new conservation initiatives are in this region including partnerships between private landholders non government conservation organisations that buy and manage land including Bush Heritage Australia and the Australian Wildlife Conservancy and community based natural resource management groups such as Desert Channels Queensland Conservation biology in this place has a distinguished scientific history and includes two decades of ecological work by scientific editor Chris Dickman Chris is one of Australia's leading terrestrial ecologists and mammalogists He is an outstanding writer and is passionate about communicating the scientific basis for concern about biodiversity in this region to the broadest possible audience Libby Robin historian and award winning writer has co-ordinated the writings of the 46 contributors whose voices collectively portray the Desert Channels in all its facets The emphasis of the book is on partnerships that conserve landscapes and communities together Short textboxes add local and technical commentary where relevant Art and science combine with history and local knowledge to richly inform the writing and visual understanding of the country Conservation here is portrayed in four dimensions place landscape biodiversity and livelihood These four parts each carry four chapters The 4x4 structure was conceived by acclaimed artist Mandy Martin who has produced suites of artworks over three seasons in this format with commentaries which make the interludes between parts Martin's work offers an aesthetic framework of place which shapes how we see the region Desert Channels explores the impulse to protect the varied biodiversity of the region and its Aboriginal pastoral and prehistoric heritage including some of Australia's most important dinosaur sites The work of Alice Duncan Kemp the region's most significant literary figure is highlighted Even the sounds of the landscape are not forgotten the book's webpage has an audio interview by Alaskan radio journalist Richard Nelson talking to ecologist Steve Morton at Ocean Bore in the Simpson Desert country The twitter of zebra finches accompanies the interview Conservation can be accomplished in various ways and Desert Channels combines many distinguished voices The impulse to conserve is shared by local landholders conservation enthusiasts from the community and from national and international organisations Indigenous owners professional biologists artists and historians
