*Biology and Knowledge* Jean Piaget, 1975      Mapping Biology Knowledge K. Fisher, J.H. Wandersee, D.E. Moody, 2006-04-11 Mapping Biology Knowledge addresses two key topics in the context of biology promoting meaningful learning and knowledge mapping as a strategy for achieving this goal Meaning making and meaning building are examined from multiple perspectives throughout the book In many biology courses students become so mired in detail that they fail to grasp the big picture Various strategies are proposed for helping instructors focus on the big picture using the need to know principle to decide the level of detail students must have in a given situation The metacognitive tools described here serve as support systems for the mind creating an arena in which learners can operate on ideas They include concept maps cluster maps webs semantic networks and conceptual graphs These tools compared and contrasted in this book are also useful for building and assessing students content and cognitive skills The expanding role of computers in mapping biology knowledge is also explored      **Knowledge Acquisition, Organization, and Use in Biology** Kathleen M. Fisher, Michael R. Kibby, 2012-12-06 Biology education like science education in general is in the midst of a revolution that is worldwide in scope The changes in the ways science education researchers think about learning and understanding represent a major paradigm shift In this book international leaders in the field of biology education research give summaries of problems and solutions in biology learning and teaching at various grade levels Based on a NATO workshop in the Special Programme on Advanced Educational Technology it provides practical information for teachers especially in using new interactive constructivist teaching methods For science education researchers it offers a concise summary of a number of research issues in biology education      *Biological Knowledge Discovery Handbook* Mourad Elloumi, Albert Y. Zomaya, 2015-02-04 The first comprehensive overview of preprocessing mining and postprocessing of biological data Molecular biology is undergoing exponential growth in both the volume and complexity of biological data and knowledge discovery offers the capacity to automate complex search and data analysis tasks This book presents a vast overview of the most recent developments on techniques and approaches in the field of biological knowledge discovery and data mining KDD providing in depth fundamental and technical field information on the most important topics encountered Written by top experts Biological Knowledge Discovery Handbook Preprocessing Mining and Postprocessing of Biological Data covers the three main phases of knowledge discovery data preprocessing data processing also known as data mining and data postprocessing and analyzes both verification systems and discovery systems BIOLOGICAL DATA PREPROCESSING Part A Biological Data Management Part B Biological Data Modeling Part C Biological Feature Extraction Part D Biological Feature Selection BIOLOGICAL DATA MINING Part E Regression Analysis of Biological Data Part F Biological Data Clustering Part G Biological Data Classification Part H Association Rules Learning from Biological Data Part I Text Mining and Application to Biological Data Part J High Performance Computing for Biological Data Mining Combining sound theory with practical applications in molecular biology

**Biology and Knowledge** Jean Piaget, 1971 Knowledge and the World: Challenges Beyond the Science Wars Martin Carrier, Johannes Roggenhofer, Günter Küppers, Philippe Blanchard, 2013-03-09 The fundamental question of whether or in what sense science informs us about the real world has pervaded the history of thought since antiquity Is what science tells us about the world determined unambiguously by facts or does the content of any scientific theory in some way depend on the human condition Sokal's hoax attacked the mere seriousness of post modern views of science and shifted this controversial debate to a new level which very quickly came to be known as Science Wars Knowledge and the World examines and reviews the broad range of philosophical positions on this issue extending from realism to relativism to expound the epistemic merit of science and to tackle the central question in what sense can science justifiably claim to provide a truthful portrait of reality Challenges beyond the Science Wars are taken up by contributions of scientists sociologists and philosophers of science which connect perspectives of a wide variety of disciplines including biology and cultural studies This book addresses everyone interested in the philosophy and history of science and in particular in the interplay between the social and natural sciences

**Knowledge-Based Bioinformatics** Gil Alterovitz, Marco Ramoni, 2011-04-20 There is an increasing need throughout the biomedical sciences for a greater understanding of knowledge based systems and their application to genomic and proteomic research This book discusses knowledge based and statistical approaches along with applications in bioinformatics and systems biology The text emphasizes the integration of different methods for analysing and interpreting biomedical data This in turn can lead to breakthrough biomolecular discoveries with applications in personalized medicine Key Features Explores the fundamentals and applications of knowledge based and statistical approaches in bioinformatics and systems biology Helps readers to interpret genomic proteomic and metabolomic data in understanding complex biological molecules and their interactions Provides useful guidance on dealing with large datasets in knowledge bases a common issue in bioinformatics Written by leading international experts in this field Students researchers and industry professionals with a background in biomedical sciences mathematics statistics or computer science will benefit from this book It will also be useful for readers worldwide who want to master the application of bioinformatics to real world situations and understand biological problems that motivate algorithms
