Essays in Population History, Volume Three Sherburne F. Cook, Woodrow Borah, 2023-11-15 Essays in Population History Mexico and California Volume Three is the final volume of the Cook and Borah Essays marking the conclusion of the collaborative work of Sherburne F Cook who passed away in 1974 This volume features three essays that continue the

research into the impact of European contact on indigenous populations a theme central to Cook's academic work. The first chapter focuses on determining the low point of the indigenous population of central Mexico illustrating the dramatic population decline following the Spanish Conquest. The chapter draws from a key document that not only provides demographic data but also sheds light on the royal fiscal system contributing to a deeper understanding of Mexico's colonial era administration. The second chapter revisits the socio-economic conditions of central Mexico during the sixteenth and early seventeenth centuries particularly food production and nutrition. This essay builds on earlier anthropological studies and offers a revised theory on the widespread undernutrition experienced by the majority of the population. The final chapter shifts the focus to northern California where Cook had long wished to apply the demographic analysis techniques used for Mexican materials. This chapter examines the registers of eight northern California missions providing a truncated but insightful exploration of the impact of European colonization on the Costanoan Indians and other groups in the region. Although the study was not completed it lays the groundwork for further research into the functioning of the California missions and their demographic effects. This volume while concluding Cook's work also opens the door for future scholars to expand upon these findings. This title is part of UC Press's Voices Revived program which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice reach and impact. Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology. This title was originally published in 1979.

Calories and Corsets Louise Foxcroft, 2012-01-05 Today we are urged from all sides to slim down and shape up to shed a few pounds or lose life threatening stones. The media's relentless obsession with size may be perceived as a twenty first century phenomenon but as award winning historian Louise Foxcroft shows we have been struggling with what to eat when and how much ever since the Greeks and the Romans first pinched an inch. Meticulously researched surprising and sometimes shocking *Calories and Corsets* tells the epic story of our complicated relationship with food the fashions and fads of body shape and how cultural beliefs and social norms have changed over time. Combining research from medical journals letters articles and the dieting bestsellers we continue to devour including one by an octogenarian Italian in the sixteenth century Foxcroft reveals the extreme and often absurd lengths people will go to in order to achieve the perfect body from eating carbolic soap to chewing every morsel hundreds of times to a tasteless pulp. This unique and witty history exposes the myths and anxieties that drive today's multi billion pound dieting industry and offers a welcome perspective on how we can be healthy and happy in our bodies.

Understanding Human Metabolism Keith N. Frayn, 2022-09-08 Describes the metabolic processes that underlie our daily lives and dispels common misconceptions related to diet nutrition and exercise.

The Oxford Handbook of Food Ethics Anne Barnhill, Mark Budolfson, Tyler Doggett, 2018 Academic food ethics incorporates work from philosophy but also anthropology economics the environmental sciences and other natural sciences geography law and sociology. Scholars from these fields

have been producing work for decades on the food system and on ethical social and policy issues connected to the food system Yet in the last several years there has been a notable increase in philosophical work on these issues work that draws on multiple literatures within practical ethics normative ethics and political philosophy This handbook provides a sample of that philosophical work across multiple areas of food ethics conventional agriculture and alternatives to it animals consumption food justice food politics food workers and food and identity

mobility **The Naked Soldier** Major Jesse M Baltazar, USAF (Ret.),2016-03-14 The Naked Soldier is the inspiring story of Major Jesse M Baltazar USAF Ret a survivor of the infamous Bataan Death March during WW II His service to America covers three wars four federal agencies postings in nine countries and government travel to over 80 nations This is a story about an American Patriot Soldier Airman and Diplomat about his character honor and commitment *The European Miracle* E. L. Jones,1987-08-31 Why did modern states and economies develop first in the peripheral and late coming culture of Europe This historical puzzle looms behind every study of industrialization and economic development In his analytical and comparative work Eric Jones sees the economic condition forming where natural environments and political systems meet Europe s economic rise is explained as a favoured interaction between them contrasting with the frustrating pattern of their interplay in the Ottoman empire India and China For the second edition Professor Jones has added a new introduction and an updated bibliographical guide *Rethinking Diabetes* Gary Taubes,2024-12-10 An eye opening investigation into the history of diabetes research and treatment by the award winning journalist and best selling author of Why We Get Fat Gary Taubes s meticulous science based work makes him the Bryan Stevenson of nutrition an early voice in the wilderness for an unorthodox view that is increasingly becoming accepted Niel Barsky The Guardian Before the discovery of insulin diabetes was treated almost exclusively through diet from subsistence on meat to reliance on fats to repeated fasting and near starvation regimens After two centuries of conflicting medical advice most authorities today believe that those with diabetes can have the same dietary freedom enjoyed by the rest of us leaving the job of controlling their disease to insulin therapy and other blood sugar lowering medications Rather than embark on futile efforts to restrict sugar or carbohydrate intake people with diabetes can lead a normal life complete with the occasional ice cream cake side of fries or soda These guiding principles however have been accompanied by an explosive rise in diabetes over the last fifty years particularly among underserved populations And the health of those with diabetes is expected to continue to deteriorate inexorably over time with ever increasing financial physical and psychological burdens In *Rethinking Diabetes* Gary Taubes explores the history underpinning the treatment of diabetes types 1 and 2 elucidating how decades old research that is rife with misconceptions has continued to influence the guidance physicians offer at the expense of their patients long term well being The result of Taubes s work is a reimagining of diabetes care that argues for a recentring of diet particularly fewer carbohydrates and more fat over a reliance on insulin Taubes argues critically and passionately that doctors and medical researchers should question the established wisdom that may have enabled the current epidemic of diabetes and obesity and renew their focus on clinical trials to resolve controversies that are now a century in the making
