Biology Of Radiation Carcinogenesis

John M. Yuhas

Biology Of Radiation Carcinogenesis:

Biology of Radiation Carcinogenesis John M. Yuhas, *Radiation Carcinogenesis* Arthur C. Upton, 1986 This book provides the first comprehensive and systematic survey of present knowledge about radiation carcinogenesis World experts review in detail current information on such topics as the incidence of various forms of cancer in irradiated populations the carcinogenic effects of ionizing radiation in laboratory animals theoretical mechanisms of radiation carcinogenesis and the implications of the data for assessing the risks of human cancer In view of recent controversy about the carcinogenic hazards of low level exposure to radiation and other carcinogens this book is a timely contribution toward our understanding of the carcinogenic risks of low level radiation *Handbook of Radiobiology* Kedar N. Prasad, 2020-08-18 This handbook presents the most current information on the effects of ionizing radiation on mammalian cells with emphasis on human tissues The dose effect relationship is emphasized in a quantitative manner The book contains up to date data on the late effects of low levels of radiation on humans It also provides some of the late consequences of radiation therapy detected among cancer survivors *Radiation Biology and Cancer*, 1959 Effects of Low Dose and Low Dose Rate Radiation Oddvar F. Nygaard, Warren K. Sinclair, John T. Lett, 2013-10-22 *Advances in Radiation Biology Volume 6 Effects of Low Dose and Low Dose Rate Radiation* examines the biological effects of low dose and low dose rate ionizing radiation on a broad scale covering various articles from microdosimetry to analyses of human responses Estimates of the effects on humans from low doses or from sustained exposures to low dose rates of ionizing radiations are of critical importance for the assessment of radiation risks under occupational and environmental conditions This book consists of such knowledge that is essential for radiation protection and governmental regulatory activities pertaining to radiation exposure This volume is intended for radiobiologists radiation epidemiologists radiation physicists radiation safety personnel health officials and individuals involved in regulatory activities **Aging, Carcinogenesis, and Radiation Biology** Kendric Smith, 2013-03-09 The covalent attachment to deoxyribonucleic acid in vivo of a large number of different types of chemical compounds both normal cellular constituents such as proteins and amino acids and also exogenous compounds such as drugs carcinogens etc have been shown to exert profound effects upon cells Four research activities formerly considered to be totally independent relate to this problem of nucleic acid adducts 1 normal covalent attachment of DNA to membranes protein linkers in chromosomes etc 2 the roles of radiation and chemical enhancement of DNA adduct formation in cell killing and mutagenesis A related field is the use of known cross linking reactions to gain information on structural associations in macromolecular complexes 3 the relevance of DNA adducts to chemical and radiation carcinogenesis 4 the relevance of DNA adducts to the cross linking theory of cellular aging 1 There are numerous examples of normal linkages between DNA and protein e g DNA membrane attachment sites protein linkers in chromosomes amino acids covalently linked to DNA as a function of growth conditions and gene regulation by non covalently bound proteins A summary of data on natural adducts to DNA thus serves to introduce the

subject of the radiation and chemical enhancement of DNA adduct formation 2 In the past radiation biology has been concerned mainly with trying to understand the radiation chemistry of purified DNA and the biological effects and repair of these radiation induced alterations when produced in cellular DNA **ERDA Energy Research Abstracts** United States. Technical Information Center,1977 **ERDA Energy Research Abstracts** ,1977 *Advances in Radiation Biology* John T. Lett,Howard Adler,2013-10-22 *Advances in Radiation Biology* Volume 9 provides an overview of the state of knowledge in radiation biology The book contains nine chapters and begins with a study on the ways in which physical and chemical agents might trigger regulatory dysfunction and how these agents might interact with each other This is followed by separate chapters on the mechanisms underlying changes in vascular function after doses of radiation in the therapeutic range and their role in the development of late effects in normal tissues the future of hypoxic cell sensitizers in the clinical setting DNA strand break formation by ionizing radiation and major pathways which result in radiation induced loss of cellular proliferative capacity Subsequent chapters deal with the solid state radiation chemistry of DNA radiosensitivity of proliferating mammalian cells the use of microwave radiofrequency energy cancer treatment and the decline of basic radiobiology *Current Cancer Research on Radiation Carcinogenesis and Related Radiobiology* ,1981
