the layman trying to understand the implications of biology on modern life Ornithology, Evolution, and Philosophy Jürgen Haffer, 2007-08-16 This book is the first detailed biography of Ernst Mayr He was an architect of the Synthetic Theory of Evolution and the greatest evolutionary biologist since Charles Darwin influential historian and philosopher of biology outstanding taxonomist and ornithologist and naturalist He is one of the most widely known biologists of the 20th century Mayr used the theories of natural selection and population thinking as theoretical models within the framework of historical biological studies He was the first to emphasize the role of biopopulations thereby pointing out the basic difference between population thinking and typological essentialism Man's Future Birthright Hermann Joseph Muller, 1973-01-01 Hermann Joseph Muller 1890 1967 was a member of the early genetics group at Columbia University that developed the chromosome theory of inheritance T H Morgan received the Nobel Prize in Medicine and Physiology for this work in 1934 and Muller his student received the Nobel Prize in 1946 for his discovery of radiation induced mutation Muller s writings extended beyond contributions to technical journals He was an active critic of social abuse of science he advocated eugenic programs based on free choice and he played a major role in the reform of high school biology Muller s social views were published in magazines and journals which are accessible to scholars more than to the lay reader or student They have been collected here to show how extensively he thought our lives are affected by radiation evolution modern medicine and gene theory He attempted to alert humanity to the dangers of neglect and abuse of their genetic heritage He also used humanistic values to urge mankind to improve itself to foster cooperativeness to increase health and intelligence and to adopt an evolutionary outlook A companion collection of essays The Modern Concept of Nature Essays on Theoretical Biology by H J Muller also published by State University of New York Press deals with Muller s scientific contributions to genetics and evolution It was Muller who developed the relation between genes and mutation his views on the primacy of the gene in biology are reflected today in the similar primacy of nucleic acids as the basis of life For students of the history of ideas a collection of these essays would illustrate how genetic thinking prepared the world view for molecular biologists The relation of science to values is often neglected because of the inaccessibility of the written contributions of famous scientists To read Muller s major essays in these two areas is an important way to evaluate a scientist s career his maturation of ideas and his developing application of science to society Illuminating Human Evolution: 150 Years after Darwin Jaume Bertranpetit, Juli Peretó, 2022-10-06 This book presents a series of perspectives showing the current knowledge about human evolution On the occasion of the 150th anniversary of Darwin s book The Descent of Man and Selection in Relation to Sex in which he explicitly addresses the natural origin of the human species this collective work reviews current and diverse aspects of human evolution from psychology linguistics genomics paleontology artistic expression or sexual selection It also offers a historical social and ideological context of what is often considered to be Darwin s second great work after The Origin of Species Although current research is concentrated largely on fossils and genomes this book also deals with the main points Darwin centered

his attention on comparative morphology and psychology and sexual selection It also covers other new aspects such as the origin of art social structure and social learning With contributions from leading experts in their respective fields the book guides readers to the study of the social context of Darwin and his time and the state of the art of studies on human evolution and sexual selection considering all aspects that Darwin examined including those that emerged later and now are important disciplines in our understanding of our own evolution The English translation of parts of this book from its Spanish original manuscript was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content
