Abstract Critical thinking skills are referred to as one of the 21st-century skills. These skills should be empowered through Biology learning. This study aims to analyze the improvement of biology-critical thinking skills in students who are taught through the CIRC learning model based on the scientific approach (Cirsas). Critical thinking skills are measured by tests developed by researchers and validated by theoretical biologists. The instrument includes indicators of critical thinking skills such as formulating problems, giving arguments, making deductions, conducting inductions, conducting evaluations, and deciding and implementing. This study used a quasi-experimental method with a pretest-posttest non-equivalent control group design. This study involved 160 students (M = 95, F = 65) of 8th grade of a Madrasah Tsanawiyah School in Bogor. The findings of this study show that students who are taught by Cirsas have higher Biology-critical thinking skills than those by conventional learning. In conclusion, Cirsas learning was recommended to develop or enhance students' critical thinking skills related to biological concepts.

Students with good critical thinking skills in a learning environment could provide favorable implications in terms of cultivating an attitude of self-confidence by considering self as a person who can give benefits by becoming an active contributor in the learning process [24,25]. Critical thinking skills in Biology learning could be developed through cooperative learning [16,26] emphasizing on reading activities [7,21] and scientific approach-oriented activities [20,23,27]. Scientific approach gives opportunity to students to discuss with others to make analysis of the natural phenomena and try to evaluate and solve problem, so this can improve critical thinking [13,14].

The scientific approach is recommended in the 2013 Curriculum in Indonesia [7,28,29]. Indonesian educational process standard states that learning is conducted by selecting a scientific approach adjusted to competence characteristics and level of education. Several activities in the scientific approach include observing, asking, trying,
