Periodicals and Serials Catalog J. Reuben Clark, Jr., Library, 1974 *The Geometry of Biological Time* Arthur T. Winfree, 2013-03-09
Geometry of Biological Time deals with dynamics of processes that repeat themselves regularly. Such rhythmic return through a cycle of change is an ubiquitous principle of organization in living systems. In this revised and updated edition the author plans to extend the thread from 1980 to the present concentrating on areas which he personally feels have been interesting and where he feels there will be much activity in the future. This involves going through spatial biochemical electrophysiological and organismic dynamical systems and patterns that were discovered by pursuing the theme of phase singularities that the original book introduced. In particular the work on excitability in cell membranes has been thoroughly updated as have the references throughout the book. *Marine Bivalve Molluscs* Elizabeth Gosling, 2015-07-07
Marine Bivalve Molluscs is a comprehensive and thoroughly updated Second Edition of *Bivalve Molluscs* covering all major aspects of this important class of invertebrates. As well as being an important class biologically and ecologically many of the bivalves are fished and cultured commercially e.g. mussels, oysters, scallops and clams in a multi billion dollar worldwide industry. Elizabeth Gosling has written a landmark book that will stand for many years as the standard work on the subject. Chapters in *Marine Bivalve Molluscs* cover morphology, ecology, feeding, reproduction, settlement and recruitment, growth, physiology, fisheries, aquaculture, genetics, diseases and parasites and public health issues. A full understanding of many of these aspects is vital for all those working in bivalve fisheries and culture. An essential purchase for anyone concerned with this important class of animals, copies of *Marine Bivalve Molluscs* should be on the shelves of biologists, ecologists, environmental scientists, fisheries scientists and personnel within the aquaculture industry. Copies of the book should be available in all libraries and research establishments where these subjects are studied or taught.
REVIEWS OF THE FIRST EDITION An admirable achievement, a valuable addition to marine sciences libraries everywhere. The back cover of this book says that it is a landmark text that will stand for many years as the standard work on this subject. I can only agree with this sentiment. *Aquaculture* A welcome addition to the literature and provides the reader with a comprehensive overview of biological and environmental factors that affect and control both natural populations of marine bivalves and culture operations. *Aquaculture International* The author has done an admirable job in compiling a wealth of information into a readable text. *Transactions of the American Fisheries Society* Will serve well as a description of much of both the experimental biology and the aquaculture of bivalves. *Journal of Experimental Marine Biology and Ecology* Provides excellent reviews of all major aspects, an extremely important reference for anyone engaged in bivalve research, fisheries management and aquaculture. *Quarterly Review of Biology* The book is very readable in an easy style. It is well illustrated and there is a wealth of data and statistics presented. *Bulletin of the Malacological Society of London* **Biological, Physical and Geochemical Features of Enclosed and Semi-enclosed Marine Systems** E.M. Blomqvist, E. Bonsdorff, Karel

Essink,2013-06-29 The proceedings of the joint BMB 15 and ECSA 27 Symposium provides the reader with some of the advances in the study of biology ecology and physical and biochemical modelling of enclosed or semi enclosed marine brackish and estuarine systems the Baltic Sea the North Sea the White Sea the Black Sea and the Ionian Sea The book covers a wide range of topics in this field including hydrography and modelling eutrophication environmental gradients pelagic and benthic communities introduced species and case studies of environmental impact This volume of 28 papers summarizes current knowledge on the broad scale topics of enclosed and semi enclosed marine systems and should be of interest to scientists students and administrators within the field of marine ecology environmental impact control and conservation

Sovak,2012-12-06 Contrast media are drugs by default Had there been no default there would be no need for a related pharmacology and thus no need for this book Radiographic contrast media CM are substances whose primary purpose is to enhance diagnostic information of medical imaging systems The position of CM in pharmacology is unique First there is the

unusual requirement of biological inertness An ideal CM should be completely biologically inert i.e stable not pharmacologically active and efficiently and innocuously excretable Because they fail to meet these requirements CM must be considered drugs The second unusual aspect of CM is that they are used in large quantities their annual production being measured in tens of tons It is not in spite of but because of the increased use of new radiographic systems computed tomography digital radiography etc that consumption is on the rise And it is not likely that the other emerging imaging modalities NMR ultrasonography etc will displace radiographic CM soon it is quite probable that these remarkable compounds will continue to play an active role in diagnostic imaging in the foreseeable future
