The number of currently known described and accepted plant species is ca 374 000 of which approximately 295 00 79% are angiosperms Almost 90% of this huge number of flowering plants is pollinated by animals mostly insects via nectar mediated interactions Notably three fourths of the leading global crop plants produce nectar and are animal pollinated which is estimated to account for one third of human food resources Nectar can also be produced on tissues outside of flowers by so called extrafloral nectaries and commonly mediate interactions with body guard ants and other pugnacious insects that defend the plant from herbivores Extrafloral nectar is present in almost 4 000 plant species a majority of them in the angiosperms This brief summary on the occurrence of nectar in the plant kingdom is just to highlight that nectar has a fundamental role in two basal functions that allow the maintenance of our ecosystems sexual plant reproduction and protection of plants from herbivory Despite playing essential ecological and evolutionary functions our current knowledge about nectar is largely incomplete however new research directions and perspectives on nectaries and nectars have arisen in recent years In the last two decades there were only a few moments in which nectar was the main character in international meetings or in published books In 2002 the first and only international meeting Nectar and nectary from biology to biotechnology dedicated exclusively to nectar and nectaries was held in Italy Montalcino Siena and in 2003 the proceedings were published in a special volume of Plant Systematics and Evolution 238 issue 1 4 In 2007 the book Nectar and Nectaries was published Springer with most of the contributions provided by authors that attended the meeting in Italy Another book dedicated to nectar was published in 2015 Nectar Production Chemical Composition and Benefits to Animals and Plants Nova Science Publishers covering aspects mainly related to nectar chemical composition and plant pollinator interactions Similarly symposia focused on nectar have been organized within the International Botanical Congress in 2011 and 2017 Considering that the last few years has yielded essential developments in the understanding of nectar biology we thought now is the moment to further stimulate research on this important topic This aim has been met through 18 papers published in our Research Topic New Perspectives on the Biology of Nectaries and Nectars with subjects spanning evolution and ecology to nectar chemistry and nectary structure

Nectar is the most important reward offered by plants to pollinating animals This book is a modern and interdisciplinary text on nectar and nectaries prompted by the expansion of knowledge especially in the more ecological and now molecular fields and the strong recent interest in pollination biology The topics covered vary widely they include historical aspects the structure and ultrastructure of nectaries and relationships to plant systematics the dynamics of nectar secretion nectar chemistry and the molecular biology of defence proteins adaptations to insect and vertebrate nectar consumers and consequences for

pollination ecology and broad scale studies of nectar resources at the community level      *The pollination of cultivated plants: A compendium for practitioners* Food and Agriculture Organization of the United Nations, 2018-10-15 More than twenty years ago the Food and Agriculture Organization of the United Nations contributed to the growing recognition of the role of pollination in agricultural production with the publication of *The Pollination of Cultivated Plants in the Tropics* Since that time the appreciation of pollinators has grown alongside the realization that we stand to lose them But our knowledge and understanding of crop pollination pollinator biology and best management practices has also expanded over this time This volume is the second of two compendiums for practitioners sharing expert knowledge on all dimensions of crop pollination in both temperate and tropical zones The focus in this second volume is on management study and research tools and techniques      **Model Organisms in Plant Developmental Biology – their effectiveness and limitations** Neelima Roy Sinha, Verónica S. Di Stilio, 2024-09-26 Model organisms represent an invaluable resource for fundamental and applied research allowing the identification of the mechanistic basis of evolutionary innovations This article collection will showcase studies of established as well as emerging Model Organisms in Plant Developmental Biology their effectiveness and limitations that have significance to the field broadly including EvoDevo Classically used for genetic and molecular studies in Plant Biology model organisms are progressively entering many subdisciplines within Plant Development and EvoDevo Recent advancements in the fast growing field of plant model organisms and their hugely increased phylogenetic breadth and availability of genomes and transgenic techniques have led to a burst of innovative ideas and synthesis in recent publications spanning the range from an analysis of fossils to single cell sequencing However it also raises the question of how broad is the application of knowledge gained from these studies and its relevance to the field of Plant Development and EvoDevo To address those questions this research topic focuses on new insights latest discoveries current challenges and future perspectives in the study of model organisms and how much knowledge gained from them can be extrapolated broadly Authors are encouraged to identify the greatest unifying concepts in their sub disciplines and the challenges emerging from the use of model plants as well as to put forward potential solutions to address those challenges      *Secretions and Exudates in Biological Systems* Jorge M. Vivanco, František Baluška, 2012-01-21 Secretions and emissions in biological systems play important signaling roles within the organism but also in its communications with the surrounding environment This volume brings together state of the art information on the role of secretions and emissions in different organs and organisms ranging from flowers and roots of plants to nematodes and human organs The plant chapters relate information regarding the biochemistry of flower volatiles and root exudates and their role in attracting pollinators and soil microbial communities respectively Microbial chapters explain the biochemistry and ecology of quorum sensing and how microbial communities highly co adapted to plants can aid in bio energy applications by degrading ligno cellulosic materials Other chapters explain the biology of secretions by nematodes algae and humans among other organisms This volume will be a welcome addition to

the literature as no other book covers aspects related to biological secretion in such a holistic and integrative manner

Reproductive Ecology of Tropical Forest Plants K.S. Bawa, M. Hadley, 1991-01-15 Reproductive Ecology of Tropical Forest Plants reviews recent developments in the reproductive ecology of tropical forest plants and explores the implications of current findings on forest structure function management and conservation It examines how insights gained from reproductive ecology can be helpful in the management of tropical forest resources and discusses directions of future research

**Ecology and Biomechanics** Anthony Herrel, Thomas Speck, Nicholas P. Rowe, 2006-01-13 We live in a well engineered universe This engineering is present in every system and organism in existence including in the actions and interactions of plants and animals In fact one could say that the function and movement of plants and animals is just as much a part of their makeup as chlorophyll and fiber or bone and blood Consequently if *Esau's Plant Anatomy* Ray F.

Evert, 2006-08-28 This revision of the now classic Plant Anatomy offers a completely updated review of the structure function and development of meristems cells and tissues of the plant body The text follows a logical structure based organization Beginning with a general overview chapters then cover the protoplast cell wall and meristems through to phloem periderm and secretory structures There are few more iconic texts in botany than Esau's Plant Anatomy this 3rd edition is a very worthy successor to previous editions ANNALS OF BOTANY June 2007 Pollination of Cultivated Plants in the Tropics

Food and Agriculture Organization of the United Nations, 1995-01-01 This bulletin based on contributions from various contributors and edited by Dr D W Roubik introduces the reader to various aspects of natural and insect pollination It discusses the pollinators themselves and the ecological and economic importance of pollination as well as applied pollination in temperate tropical oceanic islands and mainland tropics and alternatives to artificial pollinator populations Prospects for the future are also discussed Chapter 2 deals with successful pollination with pollinator populations the evaluation of pollinators and floral biology and research techniques The behaviour of pollinators and plant phenology and various case studies on the preparation of pollinators for use in tropical agriculture are also discussed A glossary and various appendices regarding cultivated and semi cultivated plants in the tropics pollination contracts and levels of safety of pesticides for bees and other pollinators are included *Coastal Dunes* M. L. Martínez, Norbert P. Psuty, 2007-09-14 Coastal dunes occur in

almost every latitude from tropical to polar and have been substantially altered by human activities Many are already severely and irreversibly degraded Although these ecosystems have been studied for a long time as early as 1835 there has been a strong emphasis on the mid latitude dune systems and a lack of attention given to the tropics where unfortunately much of the modern exploitation and coastal development for tourism is occurring This book brings together coastal dune specialists from tropical and temperate latitudes which together cover a wide set of topics including geomorphology community dynamics ecophysiology biotic interactions and environmental problems and conservation A major product of this book is a set of recommendations for future research identifying relevant topics where detailed knowledge is still lacking It

also identifies management tools that will promote and maintain the rich diversity of the dune environments in the context of continuing coastal development *Biology Bulletin of the Academy of Sciences of the USSR. Akademiia nauk SSSR.*,1986

Buckley, 2012-12-06 Early research on ant plant interactions in Australia was largely confined to the economically important problem of ants harvesting surface sown pasture seed e g Campbell 1966 The report by Berg 1975 of widespread myrmecochory in Australia and a burst of overseas research stimulated research on a range of ant plant interactions in Australia This book summarizes such research and presents recent and current work on seed harvesting myrmecochory ant epiphytes extrafloral nectaries ant plant homopteran systems and the influence of vegetation on ant faunas I hope that it will encourage further work in these and related areas and that the review and bibliography of ant plant interactions in the rest of the world will serve as a useful source for those entering the field The richness of Australia's flora and ant fauna render it a particularly interesting continent for the study of interactions between them As immediately apparent from the list of contents ant seed interactions are particularly significant in Australia This is not surprising for a relatively dry continent bearing a largely sclerophyllous plant cover Future research however especially in the tropical north is likely to reveal further types of interaction perhaps corresponding to those characteristic of the tropics elsewhere or perhaps distinctively Australian Some of the chapters have been shortened and modified considerably from the original manuscripts but the ideas and results presented are of course those of the individual authors **Pollination Biology, Vol.1** Dharam P.
