Morson, 2012-12-06 Biopsy of the gastrointestinal tract has been revolutionised by the introduction of fibreoptics. The sort of techniques which I confess interest me greatly because of the additional information which they can yield when rightly reaches as far as the second part of the duodenum and chosen are naturally linked with improved methods of the whole large bowel back to the caecum can now be tissue preservation in general bearing in mind that the sampled under direct vision and multiple small biopsies need for special techniques often becomes apparent can be obtained. Only in the jejunum and ileum are there only when the biopsy has been conventionally still limitations on the sampling of localized as opposed to generalized conditions. The sheer volume of gastro processed and examined. However I have firmly intestinal material passing through our own laboratories stabled this hobbyhorse and have included little that has risen steeply over the last years to form some 25% cannot be done in a district general hospital and nothing that I am not prepared to do myself. I have tried to of the total current work load and the rise continues stress particularly common lesions which can cause nearly all of it is in biopsy form rather than as resected specimens.
