Bioremediation Field Experience Paul E. Flathman, Douglas E. Jerger, Jurgen H. Exner, 1993-12-21 Bioremediation focuses on the application of practical state of the art technology used for full scale site remediation over a wide range of environmental settings The book includes an up to date overview of the environmental regulations critical to the success of biological treatment in the field as well as the market opportunities presented for implementing bioremediation based on those regulations Crucial factors to consider prior to selecting bioremediation for site remediation are also discussed

Biotechnology Larry V. McIntire, Frederick B. Rudolph, 1996-03-22 Biotechnology the manipulation of the basic building blocks of life is rapidly advancing in laboratories around the world It has become routine to refer to DNA fingerprints and genetically engineered foods Yet the how to of biotechnology is only the beginning For every report of new therapies or better ways to produce food there is a Jurassic Park scenario to remind us of the potential pitfalls Biotechnology raises serious issues for scientists and nonscientists alike Who will decide what is safe Who will have access to our personal genetic information What are the risks when advanced science becomes big business In Biotechnology experts from science law industry and government explore a cross section of emerging issues This book offers straightforward explanations of basic science and provides insight into the serious social questions raised by these findings The discussions explore five key areas The state of the art in biotechnology including an overview of the genetic revolution the development of recombinant DNA technology and the possibilities for applying the new techniques Potential benefits to medicine and the environment including gene therapy the emerging area of tissue engineering and biomaterials and the development of therapeutic proteins Issues in technology transfer focusing on the sometimes controversial relationship between university research centers and industry Ethics behavior and values exploring the ethical issues that surround basic research and applications of new technology with a discussion of scientific misconduct and a penetrating look at the social impact of genetic discoveries Government s role including a comparison of U S European and Japanese policies on pharmaceutical and biotechnology development Biotechnology is here to stay and this volume adds immeasurably to understanding its multiple aspects and far reaching implications This book will be of interest to scientists and industry leaders involved in biotechnology issues and it will be welcomed by the concerned lay reader Frederick B Rudolph Ph D is a professor of biochemistry and cell biology at Rice University and is executive director of the Institute of Biosciences and Bioengineering Larry V McIntire Ph D is the E D Butcher Professor of Chemical and Biomedical Engineering at Rice University and is chair of the Institute of Biosciences and Bioengineering **Manual, bioventing principles and practices , Biotechnology in the Sustainable Environment** Gary S. Environmental Biotechnology for Waste Treatment Gary S. Sayler,Robert Fox,James

Blackburn,2013-11-11 The use of biotechnical processes in control of environmental pollution and in hazardous waste treatment is viewed as an advantageous alternative or adduct to physical chemical treatment technologies Yet the development and implementation of both conventional and advanced biotechnologies in predictable and efficacious field applications suffer from numerous technical regulatory and societal uncertainties With the application of modern molecular biology and genetic engineering there is clear potential for biotechnical developments that will lead to breakthroughs in controlled and optimized hazardous waste treatment for in situ and unit process use There is however great concern that the development of these technologies may be needlessly hindered in their applications and that the fundamental research base may not be able to sustain continued technology development Some of these issues have been discussed in a fragmented fashion within the research and development community A basic research agenda has been established to promote a sustainable cross disciplinary technology base This agenda includes developing new and improved strains for biodegradation improving bioanalytical methods to measure strain and biodegradation performance and providing an integrated environmental and reactor systems analysis approach for process control and optimization Superfund Technical Assistance Grant (TAG) Handbook ,1994 *Eco-Restoration of Polluted Environment* Sandip V. Rathod,2024-08-14 The book *Eco Restoration of the Polluted Environment A Biological Perspective* explores recent advances in biological strategies for the remediation of polluted environments including soil water and air It covers bioremediation of heavy metals radioactive waste and waste gases which are believed to be bottleneck problems for researchers working in this field The book contains separate chapters on genetic engineering technology for enhancement of the bioremediation potential of bioresources and the role of biosurfactants enzymes and exopolysaccharides for bioremediation of polluted environments along with basic aspects of eco restoration by microorganisms It summarizes the significant developments of many years of research in bioremediation technology and discusses them critically by presenting selected examples while also considering future research directions in the area Features Deep insight into the modes of action of various bioremediation strategies as well as the status and progress of bioremediation technology for sustainable developmental practices A research overview of bioremediation strategies using engineered biological resources for remediation of contaminants The book will also accelerate the application of suitable engineered microbes and plants for field applications A survey of interdisciplinary findings and insights on the impact of pollution on the ecosystem and human health climate and other global changes with individual solutions to the pollution issue Comprehensive information for relevant stakeholders such as global leaders agriculturists investors innovators farmers policymakers extension workers agro industrialists environmentalists and the education and health sectors as well as students and researchers in the field **Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1995** United States.
