Biosynthesis and biodegradation of wood components Takayoshi Higuchi, 2012-12-02 Biosynthesis and Biodegradation of Wood Components is a comprehensive account of the biosynthesis and biodegradation of wood and wood components Topics covered range from the localization of polysaccharides and lignins in wood cell walls to the metabolism and synthetic function of cambial tissue along with the function of cell organelles in the biosynthesis of cell wall components The biosynthesis of plant cell wall polysaccharides is also discussed This book is comprised of 22 chapters and begins with an overview of the structure of wood with emphasis on three aspects of sections of wood the cross or transverse section the tangential section and the radial section or face The following chapters deal with the structure and chemistry of the major components of wood cell walls the metabolism and synthetic function of cambial tissue the function of organelles involved in biosynthesis and the biosynthesis both of the major cell wall components of wood cellulose hemicelluloses and lignins and of wood extractives The microbial degradation of cell wall components and aromatic extractives of wood is also considered together with the microorganisms involved in lignin biodegradation as well as the physiology and biochemistry of degradation by white rot fungi This monograph will be of interest to biochemists as well as students and researchers in biochemistry

Wood and Cellulosic Chemistry, Second Edition, Revised, and Expanded David N.-S. Hon, Nobuo Shiraishi, 2000-11-08 This text details the principal concepts and developments in wood science chemistry and technology It includes new chapters on the chemical synthesis of cellulose and its technology preservation of wood resources and the conservation of waterlogged wood

Discoveries In Plant Biology (Volume Iii) Shain-dow Kung, Shang-fa Yang, 2000-06-12 Scientific progress hinges on continual discovery and the extension of previous discoveries The important series of volumes *Discoveries in Plant Biology* is specially compiled to provide a microcosmic atlas of the landmark discoveries that span the breadth of plant biology Written by renowned plant biologists the papers describe how classic discoveries were made and how they have served as the basis for subsequent breakthroughs The 24 chapters in this third volume describe discoveries which contribute to the foundations of modern plant biology The contributors many of whom personally lit the way bring readers back in time as if on a journey to retrace the paths and rethink the ideas they followed These guided tours on how to decipher the natural laws will lead to an appreciation of the development of each field from simple concepts to an advanced

multidisciplinary field of today This volume will be of special interest to botanists biochemists plant physiologists and geneticists and of general interest to those who are still fascinated by how discoveries are made Molecular Biology of Woody Plants S.M. Jain,S.C. Minocha,2013-04-17 Woody plants constitute an artificial and heterogeneous group of plants that share some common phenotypic characteristics but otherwise have no strong evolutionary relationships nor do they share a common habitat They are a primary source of fiber and timber and also include many edible fruit species Their unique phenotypic behavior includes a perennial habit associated with extensive secondary growth Additional characteristics of woody plants include developmental juvenility and maturity with respect to growth habit flowering time and morphogenetic response in tissue cultures environmental control of bud dormancy and flowering cycles variable tolerance to abiotic stresses wounding and pathogens and long distance transport of water and nutrients Woody plants particularly tree species have been the focus of numerous physiological studies to understand their specialized functions however only recently have they become the target of molecular studies Recent advances in our understanding of signal transduction pathways for environmental responses in herbaceous plants including the identification and cloning of genes for proteins involved in signal transduction should provide useful leads to undertake parallel studies with woody plants Molecular mapping techniques coupled with the availability of cloned genes from herbaceous plants should provide shortcuts to cloning relevant genes from woody plants The unique phenotypes of these plants can then be targeted for improvement through genetic engineering In this book we present a broad coverage of various aspects of plant molecular biology that are relevant to the improvement of woody plant

International Review of Cytology ,2000-06-22 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research Key Features Cellular and Molecular Biology of Capacitation and Acrosome Reaction in Spermatozoa Growth Factors and Epithelial Stromal Interactions in Prostate Cancer Development PCR Detected Genome Polymorphism in Malignant Cell Growth Cellulose Microfibrils in Plants Biosynthesis Deposition and Integration into the Cell Wall Cell Biology of Peroxisomes and Their Characteristics in Aquatic Organisms Cellular Responses to Vasectomy

Progress in Botanical Research Ioannes Tsekos,Michael Moustakas,2012-12-06 This volume is the final document of the 1st Balkan Botanical Congress and comprises after reviewing the full texts of the Congress Lectures submitted by their authors The articles refer to all branches of plant sciences in the field of pure and applied research The subjects dealt with in the Congress and each representing a separate section in this book covered the following areas of interest I Taxonomy geobotany and evolution II Biochemistry metabolism and bioenergetics III Ecology and ecophysiology IV Structure and its dynamics V Genetics plant breeding and biotechnology VI Growth development and differentiation The Congress was

organized by the Department of Botany Aristotle University of Thessaloniki and the Hellenic Botanical Society The city of Thessaloniki was chosen by the Organizers since it enjoyed the accolade of the cultural capital of Europe for the year 1997 The Thessaloniki Congress has taken on the character of an International Congress since 320 scientists mainly from the Balkan countries and the rest of Europe 26 countries in all took part in it The 11 invited speakers who shared their experience with us were well known specialists from all the European countries
