Biotechnology For Control Of Growth And Product Quality In Meat Production Implications And Acceptability:

Biotechnology for Control of Growth and Product Quality in Meat Production Paul van der Wal, F. van der Wilt, Commission of the European Communities, 1990 Food Review, 1991 *The Endocrinology of Growth, Development, and Metabolism in Vertebrates* Martin Schreibman, Colin G. Scanes, Peter K.T. Pang, 2012-12-02 The Endocrinology of Growth Development and Metabolism in Vertebrates provides an overview of vertebrate endocrinology This book aims to strengthen the bridge between medical and comparative endocrinologists by addressing the benefits that they can derive from this association Organized into five parts encompassing 24 chapters this volume starts with a discussion on the structure and biological function of growth hormone GH and prolactin PRL family This book then explains the extrinsic genetic and humoral factors that influence animal growth particularly in poikilotherms This text also elaborates the environmental conditions that affect the growth of poikilotherms including food availability temperature and photoperiod Other chapters discuss how somatotropin affects the growth development in homeotherms such as livestock species The reader is also introduced to the metabolic actions of GH which can be described in terms of short lived insulin like effects Endocrinologists molecular endocrinologists biologists molecular biologists biochemists researchers and physicians will find this book extremely useful A New Technological Era for American Agriculture United States. Congress. Office of Technology Assessment, 1992 Low-Fat Meats Harold D. Hafs, Robert G. Zimbelman, 2012-12-02 This treatise embraces all of the various efforts to reduce fat in meat Establishing methods such as breeding and feeding to control fatness are covered but emphasis is on emerging technologies including meat processing and partitioning agents to reduce fat Human implications such as health social ethical and economic factors are given special attention Sensory characteristics of low fat meat animal well being and two new directions for the future are also discussed Low Fat Meats Design Strategies and Human Implications provides an up to date overview of the technologies to produce low fat meat with a balanced discussion of the issues Paying special attention to health social ethical and economic implications inherent in developing low fat meats this volume also discusses sensory characteristics of low fat meat animal well being and new directions for the future **Use of Bovine Somatotropin (BST) in the United States: Its Potential Effects**, 1994 **Experiment Station Letter** United States. Science and Education Administration, 1947 **Metabolic Modifiers** National Research Council, Board on Agriculture, Subcommittee on Effects of Metabolic Modifiers on the Nutrient Requirements of Food-Producing Animals, 1994-02-01 In the past decade animal scientists have learned that administering recombinantly derived somatotropin growth hormone to cows improves milk production and that giving beta adrenergic agonists to meat animals improves productivity and leanness In order for these metabolic modifiers to yield benefits however sound management of the animals nutrition is necessary This volume reports on how these substances work in the animals metabolism what effects they might have on nutrient requirements of domestic livestock and what information should be developed further by

investigators The book explores the current understanding of the biology structure mechanisms of action and treatment effects of somatotropin beta adrenergic agonists and anabolic steroids A companion volume to the Nutrient Requirements of Domestic Animals series this authoritative volume will be required reading for animal scientists researchers veterinarians livestock farmers and faculty and students in university animal veterinary science programs *Food Safety of Proteins in Agricultural Biotechnology* Bruce G. Hammond, 2007-11-28 With contributions from internationally recognized experts Food Safety of Proteins in Agricultural Biotechnology comprehensively addresses how toxicology testing of proteins should be accomplished and how protein safety assessments should be carried out Beginning with a background on protein biology the book delineates the fundamental difference **Quality and Grading of Carcasses of Meat Animals** S. Morgan Jones, 2020-07-24 Three main factors affect the quality and composition of meat in farm animals Production conditions determine the composition of the meat while marketing and postmortem periods have a major bearing on the visual appearance and ultimate eating experience for the consumer It is often difficult to compare research results from different countries since meat quality is assessed by a wide variety of procedures Quality and Grading of Carcasses of Meat Animals reviews the development of commercial grading or classification schemes on a world wide basis and it provides a broad outline of the most common subjective and objective procedures for the assessment of meat quality The book provides reviews on Ante and post mortem effects on meat quality Reducing fatness in meat animals Prediction of carcass composition and meat quality World carcass and grading systems Electronic identification of animals **Proceedings of the 5th Congress of the European Association for Veterinary Pharmacology and Toxicology** European Association for Veterinary Pharmacology and Toxicology. Congress, European Association for Veterinary Pharmacology and Toxicology, 1991 *Consumer Acceptance of Genetically Modified Foods* Robert Eugene Evenson, V. Santaniello, 2004 In recent years there have been increasing concerns about the potential health risks of genetically modified foods Consumer perceptions vary between countries but are probably most pronounced in Europe and least in North America These have had a profound and controversial effect on the development of markets for GM products This book presents a compilation of studies of consumer acceptance of GM foods These studies utilized different methods and evidence including price and expenditure data experimental methods willingness to pay consumer attitudes and economic consequences *Animal Biotechnology* June Fessenden MacDonald, 1992 Food Safety 1993 Institute, 2020-08-26 Covers developments in food safety and foodborne illness organizing information to provide easy access to many topics both general and specific Comprehensive summaries of important advances in food science compiled from over 550 sources worldwide are presented **The Control of Fat and Lean Deposition** K.N. Boorman, P.J. Buttery, D.B. Lindsay, 2013-10-22 The Control of Fat and Lean Deposition is a collection of papers dealing with the methods of influencing fat and lean deposition in whole animals such as the use of the immune response the use of exogenously applied materials transgenesis or the diet itself The papers also consider the results of fat

manipulation and lean deposition on meat quality to achieve suitability for human consumption. Some papers review the hormonal regulation of muscle protein synthesis, degradation and cell growth, noting that muscle protein turnover involves the regulation of cellular growth and metabolism of the whole body. Another paper investigates the surge in lipid accumulation during fattening as well as the correlation between changes in flux or enzyme activities in growing animals to changes in lipid accretion. One paper examines the responsiveness of prenatal development of key tissues such as skeletal tissue and adipose to nongenetic influences. The paper also analyzes how such responsiveness influences the rate and composition of postnatal growth. Another paper discusses the observation that reducing fat content, especially on the muscle tissue itself, can adversely affect the eating quality and tenderness of meat. The collection is suitable for veterinarians, livestock growers and researchers engaged in food processing and preservation.
