Biotechnology and Genetics in Fisheries and Aquaculture Andy Beaumont, Pierre Boudry, Kathryn Hoare, 2010-01-21
Following the extremely well received structure of the first edition this carefully revised and updated new edition now includes much new information of vital importance to those working and researching in the fisheries and aquaculture industries. Commencing with chapters covering genetic variation and how it can be measured the authors then look at genetic structure in natural populations followed by a new chapter covering genetics in relation to population size and conservation issues. Genetic variation of traits and triploids and the manipulation of ploidy are fully covered and another new chapter is included entitled From Genetics to Genomics. The book concludes with a chapter covering the impact of genetic engineering in aquaculture. With the inclusion of a wealth of up to date information, new text and figures and the inclusion of a third author Pierre Boudry the second edition of **Biotechnology and Genetics in Fisheries and Aquaculture** provides an excellent text and reference of great value and use to upper level students and professionals working across fish biology, aquatic sciences, fisheries, aquaculture, genetics and biotechnology. Libraries in all universities and research establishments where biological sciences, fisheries and aquaculture are studied and taught should have several copies of this excellent new edition on their shelves. Completely updated, revised and expanded new edition. Subject area of ever increasing importance. Expanded authorship. Commercially useful information for fish breeders.

Aquaculture and Fisheries Biotechnology Rex A. Dunham, 2023-02-28. The genetic improvement of fish for aquaculture and related fisheries has seen huge advances over recent years. Building upon the previous two editions of **Aquaculture and Fisheries Biotechnology**, Genetic Approaches, this 3rd edition offers a presentation of traditional selective breeding, modern genetic biotechnology, genomics, gene transfer and gene editing and the latest developments in genetic biotechnology such as epigenetics, xenogenesis and genome wide association study coupled with commercial application, the impact of government regulation and expectations for the future. It provides a firm grounding in relevant aspects of classical genetics before focusing on particular aspects such as sex reversal and breeding as applied in aquaculture and fisheries. It also explores how more recent molecular genetics, genomics and biotechnology techniques can be used and combined in improvement programmes for fish and aquaculture species. A glossary explains the latest terminology used in biotechnology and genetics. This book will be useful for research scientists and students in marine biotechnology, aquaculture, biotechnology and fish genetics and breeding.
