It tells the story of nearly three decades of labor to ecologically restore twenty-one acres of ruined land near Dayton, Ohio. This story and what the author has observed motivate reflection on the human relationship to soil, the inner lives of animals, the intelligence of plants, and human psychology. **The Mentalities of Gorillas and Orangutans** Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26 Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution. In contrast, less attention has been paid to the abilities of gorillas and orangutans. This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective. The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees, bonobos, and humans. The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes, including performances in the classic domains of tool use and tool making, imitation, self-awareness, social communication, and symbol use. All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove.
