Area Array Interconnection Handbook Karl J. Puttlitz, Paul A. Totta, 2012-12-06

Microelectronic packaging has been recognized as an important enabler for the solid state revolution in electronics which we have witnessed in the last third of the twentieth century Packaging has provided the necessary external wiring and interconnection capability for transistors and integrated circuits while they have gone through their own spectacular revolution from discrete device to gigascale integration At IBM we are proud to have created the initial simple concept of flip chip with solder bump connections at a time when a better way was needed to boost the reliability and improve the manufacturability of semiconductors The basic design which was chosen for SLT Solid Logic Technology in the 1960s was easily extended to integrated circuits in the 70s and VLSI in the 80s and 90s Three I O bumps have grown to 3000 with even more anticipated for the future The package families have evolved from thick film SLT to thin film metallized ceramic to co fired multi layer ceramic A later family of ceramics with matching expansivity to silicon and copper internal wiring was developed as a predecessor of the chip interconnection revolution in copper multilevel submicron wiring Powerful server packages have been developed in which the combined chip and package copper wiring exceeds a kilometer All of this was achieved with the constant objective of minimizing circuit delays through short efficient interconnects

Fan-Out

Wafer-Level Packaging John H. Lau, 2018-04-05 This comprehensive guide to fan out wafer level packaging FOWLP technology compares FOWLP with flip chip and fan in wafer level packaging It presents the current knowledge on these key enabling technologies for FOWLP and discusses several packaging technologies for future trends The Taiwan Semiconductor Manufacturing Company TSMC employed their InFO integrated fan out technology in A10 the application processor for Apple's iPhone in 2016 generating great excitement about FOWLP technology throughout the semiconductor packaging community For many practicing engineers and managers as well as scientists and researchers essential details of FOWLP such as the temporary bonding and de bonding of the carrier on a reconstituted wafer panel epoxy molding compound EMC dispensing compression molding Cu revealing RDL fabrication solder ball mounting etc are not well understood Intended to help readers

learn the basics of problem solving methods and understand the trade offs inherent in making system level decisions quickly this book serves as a valuable reference guide for all those faced with the challenging problems created by the ever increasing interest in FOWLP helps to remove roadblocks and accelerates the design materials process and manufacturing development of key enabling technologies for FOWLP
