**The Art of Logical Thinking; Or, The Laws of Reasoning** William Walker Atkinson, 2019-11-19 In *The Art of Logical Thinking Or The Laws of Reasoning* William Walker Atkinson presents a profound exploration of the principles underlying effective reasoning and logical thought. Written in the early 20th century, the book is characterized by Atkinson's clear and engaging prose, blending practicality with philosophical musings. It delves into various reasoning methods, emphasizing the importance of clear thinking in everyday life while also addressing common logical fallacies that impede rational thought. Atkinson's discourse is enriched with examples and exercises designed to sharpen the reader's analytical skills, reflecting the intellectual climate of a period marked by rapid industrialization and a burgeoning fascination with psychology and self-improvement. William Walker Atkinson was a prominent figure in the New Thought movement, which emphasized the power of positive thinking and its implications for personal development. His experiences as a practitioner of various philosophies and a writer on topics ranging from metaphysics to personal success deeply influence his approach in this book. Atkinson's engagement with psychological concepts and his commitment to mental acuity inform his advocacy for reason as an essential tool for human potential. Recommended for scholars, students, and anyone keen on enhancing their reasoning abilities, *The Art of Logical Thinking* serves as both a foundational text and a practical guide. Atkinson's insights encourage readers to cultivate their critical thinking skills, thereby empowering them to navigate the complexities of life with clarity and confidence.

**The Art Of Logical Thinking** William Walker Atkinson, 2018-12-18 By the employment of the reasoning faculties of the mind, we compare objects presented to the mind as percepts or concepts, taking up the raw materials of thought and weaving them into more complex and elaborate mental fabrics, which we call abstract and general ideas of truth. Brooks says: "It is the thinking power of the mind, the faculty which gives us what has been called thought knowledge, in distinction from sense knowledge. It may be regarded as the mental architect among the faculties; it transforms the material furnished by the senses into new products and thus builds up the temples of science and philosophy."
