Art Scientific Thought:

German Art History and Scientific Thought Mitchell B. Frank, 2017-07-05 A fresh contribution to the ongoing debate between *Kunstwissenschaft* scientific study of art and *Kunstgeschichte* art history this essay collection explores how German speaking art historians of the late nineteenth and early twentieth century self consciously generated a field of study. Prominent North American and European scholars provide new insights into how a mixing of diverse methodologies took place in order to gain a more subtle and comprehensive understanding of how art history became institutionalized and legitimized in Germany. One common assumption about early art historical writing in Germany is that it depended upon a simplistic and narrowly defined formalism. This book helps to correct this stereotype by demonstrating the complexity of discussion surrounding formalist concerns and by examining how German speaking art historians borrowed incorporated stole and made analogies with concepts from the sciences in formulating their methods. In focusing on the work of some of the well known fathers of the discipline such as Alois Riegl and Heinrich Wölfflin as well as on lesser known figures the essays in this volume provide illuminating and sometimes surprising treatments of art history's prior and understudied interactions with a wide range of scientific orientations from psychology sociology and physiognomics to evolutionism and comparative anatomy.

Thought Experiments in Philosophy, Science, and the Arts Mélanie Frappier, Letitia Meynell, James Robert Brown, 2013 From Lucretius throwing a spear beyond the boundary of the universe to Einstein racing against a beam of light thought experiments stand as a fascinating challenge to the necessity of data in the empirical sciences. Are these experiments conducted uniquely in our imagination simply rhetorical devices or communication tools or are they an essential part of scientific practice? This volume surveys the current state of the debate and explores new avenues of research into the epistemology of thought experiments.

Styles of Scientific Thought Jonathan Harwood, 1993-03 In this detailed historical and sociological study of the development of scientific ideas Jonathan Harwood argues that there is no such thing as a unitary scientific method driven by an internal logic. Rather there are national styles of science that are defined by different values norms assumptions research traditions and funding patterns. The first book length treatment of genetics in Germany *Styles of Scientific Thought* demonstrates the influence of culture on science by comparing the American with the German scientific traditions. Harwood examines the structure of academic and research institutions the educational backgrounds of geneticists and cultural traditions among many factors to explain why the American approach was much more narrowly focussed than the German. This tremendously rich book fills a gap between histories of the physical sciences in the Weimar Republic and other works on the humanities and the arts during the intellectually innovative 1920s and it will interest European historians as well as sociologists and philosophers of science.

Thought Experiments in Science, Philosophy, and the Arts Melanie Frappier, Letitia Meynell, James Robert Brown, 2012-09-10 From Lucretius throwing a spear beyond the boundary of the universe to Einstein racing against a beam of light thought experiments stand as a fascinating challenge to

the necessity of data in the empirical sciences Are these experiments conducted uniquely in our imagination simply rhetorical devices or communication tools or are they an essential part of scientific practice This volume surveys the current state of the debate and explores new avenues of research into the epistemology of thought experiments Herder and Scientific Thought H. B. Nisbet, 1970 Shortened version of Herder and the Philosophy and History of Science Science, Art and Nature in Medieval and Modern Thought A.C. Crombie, 1990-07-01 The author sees the history of Western Science as the history of a vision and an argument initiated by the ancient Greeks in their search for principles at once of nature and of argument itself This scientific vision explored and controlled by argument and the diversification of both vision and argument by scientific experience and by interaction with the wider contexts of intellectual culture constitute the long history of European scientific thought Underlying that development have been specific commitments to conceptions of nature and of science and its intellectual and moral assumptions accompanied by a recurrent critique their diversification has generated a series of different styles of scientific thinking and of making theoretical and practical decisions which the work describes
