Creative Design Decisions A Systematic Approach To Problem Solving In:

Creative Design Decisions Stephen J. Kirk, Kent F. Spreckelmeyer, 1988 **Programming for Design** Edith Cherry, 1998-11-10 Quickly master architectural programming concepts skills and techniques In the essential discipline of architectural programming the ideas of philosophy sociology anthropology psychology and history find their focus in the realities of site conditions budgets and functionality Author Edith Cherry vividly demonstrates in this inspiring tutorial that the programming process not only helps architects avoid the endless design revisions occurring in most projects but that it is also the key to designing for optimal form and function Programming for Design lets you rapidly acquire the knowledge and skills needed to successfully program a moderate size space Rather than simply describe basic principles and practices this straightforward guide helps you master architectural programming by actually doing it Professor Cherry identifies the central issues involved and describes the skills needed to work with clients to identify problems to be solved by a design effort Emphasizing designing for people she offers proven strategies and techniques for goal setting information gathering and analysis concept development program synthesis and communicating with clients The book is also devoted to practical applications The author walks you step by step through a project of your own choosing providing numerous examples and four case studies within each step that vividly illustrate how to effectively gather process and communicate information Programming for Design features more than 200 supporting illustrations diagrams and sidebars appearing throughout the text reproducing pithy sayings by such far flung figures as Plato and Yogi Berra Einstein and Lao Tzu that help relate the programming process to other disciplines **Future Challenges in Evaluating and Managing Sustainable**

Development in the Built Environment Peter S. Brandon, Patrizia Lombardi, Geoffrey Q. Shen, 2024-09-23 Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development It examines the methods of evaluation the use of technology the creation of new models and the role of human factors for examining and developing the subject over the next twenty years **Integrated Architecture** Liangyong Wu, 2013-12-01 Integrated Architecture is both a historical and contemporary work The book was first published in 1989 by Wu Liangyong one of contemporary China's most influential architects and theoreticians with the title A General Theory on Architecture His eminence is also recognised by the international architectural community above all the group of architectural and urban planning theoreticians battling for a more decisive reform to the concepts methodologies and practices presiding over the construction and requalification of the contemporary metropolis I first met professor Wu Liangyong in 2005 at the Faculty of Architecture at the Tsinghua University of Beijing his Faculty Wu Liangyong founded the school in 1949 at the age of 24 together with Liang Sicheng the father of modern Chinese architectural studies From this moment more than sixty seven years ago professor Liangyong has remained a central figure in Beijing's academic community He remains a constant source of inspiration not only national to education

reforms and above all theoretical methodological and operative research into architecture the city and the territory He is a rare figure present throughout a lengthy historical period witness the world over to tumultuous upheavals in society and its cities A period whose most dramatic and exalting manifestations were perhaps to be found in China a period of war of hope of revolutions of great leaps forward of presumptions horrors errors new leaps forward and incomprehensible economic growth of irreversible social and cultural metamorphoses and what interests us most as architects of staggering urban growth and territorial transformations The intellect of this minute and genteel figure held fast against the storms of history The observation of events and the humanist and scientific principles of his personal culture continuously nourished an increasingly more effective reflection on the meaning of architecture in today's world He also clearly saw its inextricable ties to the substance of the city and the impossibility to substitute the figure of the architect scientist humanist and artist A few years after our meeting having absorbed direct lessons from Wu's work as an architect and theoretician I proposed an Italian translation of an anthology of his writings The material was to be drawn from his many books and essays on architecture and the city published continuously over the course of his incomparable career Professor Wu Liangyong responded with a challenge in lieu of this anthology of texts he proposed a full translation in Italian and English of a book published twenty years ago 1989's *A General Theory on Architecture* Given the pace of cultural debate it would not have been out of place to imagine a book firmly sedimented in history I understood instead that it was a milestone in the expression of Wu Liangyong's ideas a benchmark that in all likelihood served as the starting point for his later theories even the most recent Published in other fundamental essays they range across the vast field of human settlements touching on all components of the man-made environment Lucio Valerio Barbera

The Theory of Architecture Paul-Alan Johnson, 1994-04-18 The Theory of Architecture Concepts Themes Practices Paul Alan Johnson Although it has long been thought that theory directs architectural practice no one has explained precisely how the connection between theory and practice is supposed to work This guide asserts that architectural theory does not direct practice but is itself a form of reflective practice Paul Alan Johnson cuts through the jargon and mystery of architectural theory to clarify how it relates to actual applications in the field He also reveals the connections between new and old ideas to enhance the reader's powers of critical evaluation Nearly 100 major concepts themes and practices of architecture as well as the rhetoric of architects and designers are presented in an easily accessible format Throughout Johnson attempts to reduce each architectural notion into its essential concept By doing so he makes theory accessible for everyday professional discussion Topics are arranged under ten headings identification definition power attitudes ethics order authority governance relationship and expression Areas covered under these headings include Utopian thought in theories of architecture Advocacy and citizen participation in architecture The basis of architectural quality and excellence The roles of the architect as artist poet scientist and technologist Ethical obligations of architecture Rationales for models and methods of design How authority is determined in architecture How architects

structure their concepts Conventions of communication within the architectural profession Each section begins by showing the etymology of key terms of the topic discussed along with a summary history of the topic s use in architecture Discussions probe the conceptual and philosophical difficulties of different theories as well as their potential and limitations in past and present usage Among the provocative issues discussed in terms of their relationship to architecture are chaos theory feminism service to the community and the use of metaphor Johnson points out with stunning clarity the intentions as well as the contradictions and inconsistencies of all notions and concepts All architects and designers as well as students and teachers in these disciplines will gain many insights about architectural thought in this groundbreaking text

Design Computing and Cognition '12 John S. Gero, 2014-09-03 Design thinking the label given to the acts of designing has become a paradigmatic view that has transcended the discipline of design and is now widely used in business and elsewhere As a consequence there is an increasing interest in design research This is because of the realization that design is part of the wealth creation of a nation and needs to be better understood and taught The continuing globalization of industry and trade has required nations to re-examine where their core contributions lie if not in production efficiency Design is a precursor to manufacturing for physical objects and is the precursor to implementation for virtual objects At the same time the need for sustainable development requires the design of new products and processes which feeds a movement towards design innovations and inventions The papers in this volume are from the Fifth International Conference on Design Computing and Cognition DCC 12 held at Texas A M University USA They represent the state of the art of research and development in design computing and design cognition They are of particular interest to researchers developers and users of advanced computation in design and those who need to gain a better understanding of designing

Integrating Computational Thinking Through Design-Based Learning Mustafa Saritepeci, Hatice Yildiz Durak, 2025-01-02 This book creates a theoretical framework to consider the integration of

computational thinking CT into learning and teaching processes in different contexts from a design based learning DBL perspective and presents various intervention studies The chapters each focus on a different aspect of CT integration through DBL providing an overview and discussing the benefits of integrating CT into the curriculum The book also discusses the design thinking process and how it can be used to promote CT focusing on CT concepts and considering perspectives on how these concepts can be integrated into DBL activities It also explores how artificial intelligence AI based design oriented learning activities can be used to develop students CT skills examines the information technology IT concept of pattern recognition and provides examples of how this can be integrated into DBL activities It presents practical examples on integrating CT into the teaching learning process from a design based learning perspective summarizes approaches to assessing CT skills and discusses them in the context of design based learning Lastly this book also conducts a bibliometric analysis of publication and citation trends in computational thinking research conducted in design based learning
