Schuetz, 1999 Chesley Bonestell has been called the Father of Space Art His photorealistic paintings of the Moon and planets and other worlds beyond have awed us since they were first published over half a century ago Moreover he showed long before Gagarin or Glenn what it would be like for humans to explore the vastness of space As author Howard E McCurdy has written in his book *Space and the American Imagination* No artist had more impact on the emerging popular culture of space in America than Chesley Bonestell Through his visual images he stimulated the interest of a generation of Americans and showed how space travel would be accomplished Considering his great influence on both the public interest in space flight and the actual development of a national space program it is therefore both surprising and unfortunate that heretofore there has not been available a bibliography documenting those places where Bonestell's art appeared in print This book fills that void Written in cooperation with the artist's widow and his estate managers *A Chesley Bonestell Space Art Chronology* contains well over 700 entries and is the definitive reference guide to publications containing Bonestell's space art In praise of it the illustrator Vincent Di Fate says This entertaining and scholarly work is an invaluable and indispensable treasure for the vast legions of Bonestell's fans T houghtful engrossing and utterly thorough it provides the cosmic ride of a lifetime **Worlds Beyond** Frederick C. Melvin H. Schuetz, 2003

The Art of NASA Piers Bizony, Mike Acs, 2020 Formed in 1958 NASA has long maintained a department of visual artists to depict the concepts and technologies created in humankind's quest to explore the final frontier. Culled from a carefully chosen reserve of approximately 3 000 files deep in the NASA archives the 200 artworks presented in this large format edition provide a glimpse of NASA history like no other. A 2021 Locus Award Winner. From space suits to capsules from landing modules to the Space Shuttle the International Space Station and more recent concepts for space planes The Art of NASA presents 60 years of American space exploration in an unprecedented fashion. All the landmark early missions are represented in detail Gemini Mercury Apollo as are post Space Race accomplishments like the mission to Mars and other deep space explorations. The insightful text relates the wonderful stories associated with the art. For instance the incredibly rare early Apollo illustrations show how Apollo might have looked if the landing module had never been developed. Black and white Gemini drawings illustrate how the massive NASA art department did its stuff with ink pen and rubdown Letraset textures. Cross sections of the Apollo Soyuz Test Project docking adapter reveal Russian sensitivity about US male probes penetrating their spacecraft thus the androgynous adapter now used universally in space. International Space Station cutaways show how huge the original plan was but also what was retained. Every picture in The Art of NASA tells a special story. This collection of the rarest of the rare is not only a unique view of NASA history it's a fascinating look at the art of illustration the development of now familiar technologies and a glimpse of what the space program might have looked like.

Dreams of Other Worlds Chris Impey, Holly Henry, 2016-04-19 The story of unmanned space exploration from Viking to today. Dreams of Other Worlds describes the unmanned space missions that have opened new windows on distant worlds. Spanning four decades of dramatic advances in astronomy and planetary science this book tells the story of eleven iconic exploratory missions and how they have fundamentally transformed our scientific and cultural perspectives on the universe and our place in it. The journey begins with the Viking and Mars Exploration Rover missions to Mars which paint a startling picture of a planet at the cusp of habitability. It then moves into the realm of the gas giants with the Voyager probes and Cassini's ongoing exploration of the moons of Saturn. The Stardust probe's dramatic round trip encounter with a comet is brought vividly to life as are the SOHO and Hipparcos missions to study the Sun and Milky Way. This stunningly illustrated book also explores how our view of the universe has been brought into sharp focus by NASA's great observatories Spitzer Chandra and Hubble and how the WMAP mission has provided rare glimpses of the dawn of creation. Dreams of Other Worlds reveals how these unmanned exploratory missions have redefined what it means to be the temporary tenants of a small planet in a vast cosmos
