The private house represents an important site in which new spatial material and aesthetic parameters for modern living were defined after the Second World War. Within a British context the architect designed private house remained an important vehicle for the investigation of architectural ideas by second generation modernist architects and designers. Through a series of case study houses designed by Wood's firm the book reconsiders the progress of modern domestic architecture in Britain and demonstrates the ways in which architectural discourse and practice intersected with the experience performance and representation of domestic modernity in post war Britain.

The environment can be satisfying and attractive and provide scope for individual development or it can be poisonous, irritating and stunting. The papers in this volume first published in 1969 are concerned with the urban environment in which the majority of Americans live or more accurately with the environment of urbanites for the concern extends to outlying areas where urban dwellers visit and play. The chapters aim to provide a better understanding of the natural resource elements in the urban environment and will be of interest to students of environmental studies and human geography.
