Bird Of Time The Science And Politics Of Nature Conservation:

The Bird of Time Norman Winfrid Moore,1987 *The Bird of Time* N. W. Moore,1987-02-27 This book is a plea to everyone but especially to politicians administrators farmers and businessmen to take conservation seriously and as a result to integrate conservation with other activities Through research work and land management the author shows how he came to realise that conservation matters much more fundamentally than is accepted by conventional wisdom He maintains that the significance of conservation will not be recognised until it is seen within its proper contents of time and this provides the theme of the book The newness of conservation as an idea and its complexities still provide obstacles to understanding its real significance In the past too much emphasis has been put on the negative and esoteric aspects of conservation This book is important because it emphasises its positive and common sense aspects and in so doing demonstrates that conservation should now be accepted as a major national and international objective of vital concern to everybody now and in the future

The Green Case (Routledge Revivals) Steven Yearley,2014-06-23 First published in 1991 this title provides a comprehensive and objective account of the basis of green arguments and their social and political implications By the beginning of the 1990s environmental awareness had become widespread popular and fashionable throughout the West adopted by politicians manufacturers and advertising agencies The book sets out to explain why and how the green wave developed and examines the forces still shaping green politics and policies at an international level With important implications across the fields of Sociology Development Studies and Environment and Sustainability this reissue will be valuable to a broad student and academic readership *Cultures of Environmentalism* S. Yearley,2004-11-23 As environmental issues increasingly impinge on society sociologists have turned their attention to nature and the environment However unlike the majority of sociological work on environmental issues which has too often been dominated by abstract theoretical disputes this book concentrates on empirical studies in environmental sociology It shows what sociologists can bring to current debates over environmental topics including genetic modification and using the author's first hand research demonstrates how sociologists can best pursue practical work on environmental topics **Animals, politics and morality** Robert Garner,2024-06-04 How do we treat animals How ought we to treat them These are the two central questions tackled in the extensively re-written and up-dated second edition of this well-regarded and much-cited text It remains the only book which combines in a single volume not only a concise and accessible account of the on-going debate about animals in moral and legal philosophy but also a detailed analysis of how this debate is central to an understanding of the ways in which animals are treated In the last decade in Britain we have witnessed major campaigns and public controversy over the export of live animals and the use of animals in research Major campaigns have been mounted against companies such as Shamrock and Huntingdon Life Sciences The impact of genetic engineering on the welfare of animals has also emerged as an important area of concern In addition the controversy over hunting has become even more pronounced with the launch of the pro

hunting Countryside Alliance **Winged Worlds** Olga Petri, Michael Guida, 2023-06-26 This edited collection explores our often surprising modes of co inhabiting the cultural and aerial worlds of birds It focuses on our encounters with non captive birds and the cultural geographies of feathered flight This book offers a timely contribution to the more than human geographies of flight space and territory The chapters support an ethics of attention as a new basis for the conservation and cultivation of aerial habitats Contributions adopt an interdisciplinary approach to the patterns of intrusion and escape that shape our encounters with birds and unsettle our traditionally terrestrial concepts of space Each chapter focuses on a different aspect of our shared lives with birds ranging from scientific observation to the social media enabled spectacle of co habitation and spatial competition Written in a thought provoking style this book seeks to address a dearth of critical perspectives on the cultural geographies of flight and its implications for the ways in which we understand common spaces around and above us in the context of any effort at conservation Exploring Environmental History T. C Smout, 2011-08-16 This volume brings together the best of T C Smout s recent articles and contributions to books and journals on the topic of environmental history *20th Century Britain* Nicole Robertson, John Singleton, Avram Taylor, 2022-12-30 20th Century Britain provides an authoritative and accessible survey of contemporary research on economic activity society political development and culture Written by leading academics it examines recent advances in scholarship and gives a grounding in established approaches and topics The first part comprises thematic essays covering the whole of the twentieth century including chapters on the economy economic management big business parliamentary politics leisure work health international economic relations and empire It uncovers key areas of equality and diversity in chapters on women living standards social mobility ethnicity and multiculturalism and gender and sexuality The most recent subfields of historical studies are also explored including disability history and environmental economic history The second part focuses on seismic events and topics covering shorter timeframes including the World Wars interwar Depression Britain and European integration sexual behaviours civil society the 1960s cultural revolution and resisting racism This collection provides an essential guide to current academic thinking on the most important elements of twentieth century British history and is a useful tool for all students and scholars interested in modern Britain *Changing Times* Martin Chick, 2020 A study of the main changes in the British economy from 1951 focussing on nationalisation and privatisation unemployment funding of the NHS and education deindustrialisation and Britain s changing industrial structure taxation inequality environmental change and policy and the UK s changing relationship with the EEC and the European Union **Environment and Business** Alasdair Blair, David Hitchcock, 2004-08-02 This text examines how businesses and the environment interact It is ideal for students with no previous knowledge of business studies It examines in depth the ways in which business industry the physical environment environmentalism and social change have evolved alongside each other The authors use boxed case studies to highlight how business practice and the environment interact at levels from local to global with examples from

multinational companies government bodies national charities and local enterprise The book also contains a large number of informative diagrams The case studies include Shell Oil s environmental policy railways and the industrial revolution the British National Trust s business enterprises Sainsbury s approach to organic foods Australia s landcare scheme changing trends in retailing Brent Spar big game hunting and conservation

Invasive and Introduced Plants and Animals Ian D. Rotherham, Robert A. Lambert, 2012-12-06 There have been many well publicized cases of invasive species of plants and animals often introduced unintentionally but sometimes on purpose causing widespread ecological havoc Examples of such alien invasions include pernicious weeds such as Japanese knotweed an introduced garden ornamental which can grow through concrete the water hyacinth which has choked tropical waterways and many introduced animals which have out competed and displaced local fauna This book addresses the broader context of invasive and exotic species in terms of the perceived threats and environmental concerns which surround alien species and ecological invasions As a result of unprecedented scales of environmental change combined with rapid globalisation the mixing of cultures and diversity and fears over biosecurity and bioterrorism the known impacts of particular invasions have been catastrophic However as several chapters show reactions to some exotic species and the justifications for interventions in certain situations including biological control by introduced natural enemies rest uncomfortably with social reactions to ethnic cleansing and persecution perpetrated across the globe The role of democracy in deciding and determining environmental policy is another emerging issue In an increasingly multicultural society this raises huge questions of ethics and choice At the same time in order to redress major ecological losses the science of reintroduction of native species has also come to the fore and is widely accepted by many in nature conservation However with questions of where and when and with what species or even species analogues reintroductions are acceptable the topic is hotly debated Again it is shown that many decisions are based on values and perceptions rather than objective science Including a wide range of case studies from around the world his book raises critical issues to stimulate a much wider debate

Standing on the Edge of Being Richard D. Oram, 2024-11-21 Drawing together the evidence of archaeology palaeoecology climate history and the historical record this first environmental history of Scotland explores the interaction of human populations with the land waters forests and wildlife This volume takes the reader from the mid nineteenth century to the present confronting the Anthropocene the era where human action became a key driver of environmental and climatic change and explores Scotland s experience of its consequences and costs In the first half of the book we chart a course through a century of decline and loss alongside the first serious efforts to curb and reverse the worst environmental impacts from the filth spewing cities and foul factory emissions of the lowlands to the degraded mountains moorland and waters of the upland zones In the second half we trace the conflict between pressures to develop and to conserve to go for economic growth or environmental protection against the backdrop of mounting public awareness of an unfolding environmental disaster We see how political

compromises have failed to deliver security for jobs or the environment and how the toxic legacies of now vanished industries have been left to the public purse to remediate But even now all is not lost this final volume of the exploration of the last two thousand years of Scotland's environmental history calls for deeper and wider public engagement in shaping a future vision for the nation
