

A detailed photograph of a tropical bird, possibly a bee-eater, perched on a thin branch. The bird has a long, dark, slightly curved beak and a striking plumage of bright blue, orange, and white. It is facing right, with its head turned slightly towards the viewer. The background is a soft-focus view of a tropical forest with green foliage and a few small, light-colored flowers.

Birds of the Tropical Andes Owen Deutsch,Michael J. Parr,2025-07-08 A spectacular photographic guide to the birds and biodiversity of the tropical Andes Spanning virtually the entire western coast of South America the Andes are home to some of the world s most magnificent birds from exquisite hummingbirds to fabulous flamingos This beautifully illustrated large format book celebrates the splendor and extraordinary diversity of Andean birds and the habitats they depend on It draws on the latest findings from the field and sheds light on the lush alpine terrains that make this avifauna so rich and plentiful With illuminating essays that share invaluable perspectives from some of the region s leading bird conservationists **Birds of the Tropical Andes** takes readers from the Pacific coast to the jungles of the Amazon crossing peaks and high plains in search of spectacular birdlife Lavishly illustrated with a wealth of photographs Tours the vast array of habitats that comprise the Andean mountains Covers every major ecosystem and its abundant birdlife Profiles representative species including the rarest and most sought after Discusses the region s unique geology and Indigenous culture A must for birders ecotravelers and armchair naturalists The Tropical World Georg Hartwig,1873 Chap 36 The Australian race physical description general superstitious beliefs songs and dancing corroborees status of women rules regulating the property of land and distribution of food hunting techniques totemism *The Illustrated Natural History: Birds. 1864* John George Wood,1831 International Wildlife Encyclopedia Maurice Burton,Robert Burton,2002 This twenty two volume set presents the appearance and behavior of thousands of species of animals along with species population and prospects for survival in a arranged alphabetically and easy to read format Birds and Nature Vol. 9 No. 2 [February 1901] Various,2015-01-28 Example in this ebook THE HAWKS Among the birds that are most useful to man may be classed the Hawks They with the vultures the eagles and the owls belong to the bird order Raptores or birds of prey Unlike the vultures the Hawks feed upon living prey while the former seek the dead or dying animal The vultures are often called Nature s Scavengers and in many localities they have been so carefully protected that they will frequent the streets of towns seeking food in the gutters The family Falconidae which includes the Hawks the falcons the vultures the kites and the eagles all diurnal birds of prey numbers about three hundred and fifty species of which between forty and fifty are found in North America The remainder are distributed throughout the world The flight of the Hawks is more than beautiful it is majestic Even when perched high in the air on the top of a dead monarch of the forest there is a silent dignity in their pose It is from these perches that some of the species watch the surrounding country for their prey swooping down upon it when observed and seizing it in their long

sharp and curved claws Their food is almost invariably captured while on the wing The bill which is short hooked and with sinuate cutting edges is used for tearing the flesh of its victim into shreds Among our more common hawks there are but five or six that may truthfully be classed among the birds that are injurious to the interests of man Among these the Cooper s hawk and the sharp shinned hawk deserve the most attention as they feed almost entirely upon other birds and poultry To these two the name chicken hawk may be aptly applied The domestic pigeon is a dainty morsel for these ravagers of the barnyard On the other hand by far the larger number of the Hawks are of great value to man They are gluttonous whenever the food supply is unlimited and as their powers of digestion are wonderfully developed it takes but a short time for the food to be absorbed and they are then ready for more With their keen eyesight they readily detect the rodents and other small mammals that are so destructive to crops and with a remarkable swiftness of flight they pounce upon them Dr Fisher says Of the rapacious birds with which our country is so well furnished there are but few which deserve to be put on the black list and pursued without mercy The greater number either pass their whole lives in the constant performance of acts of direct benefit to man or else more than make good the harm they do in the destruction of insectivorous birds and poultry by destroying a much greater number of mammals well known to be hostile to the farmer Dr Fisher obtained the following results from the examination of the stomachs of two thousand two hundred and twelve birds of prey This number does not include any of those that feed extensively upon game and poultry In three and one half per centum the remains of poultry or game birds were found eleven per centum contained remains of other birds forty two and one half per centum contained the remains of mice in fourteen per centum other mammals were found and twenty seven per centum contained insect remains This summary includes not only the Hawks but also the owls eagles and related birds It is evident from these results that man has a friend in these birds that is of inestimable value to him To be continue in this ebook
