

A vibrant blue bird with a white belly and a distinctive orange-brown throat patch is perched on a moss-covered branch. The background is a soft, out-of-focus green, suggesting a forest or garden setting. The bird is facing left, and its sharp beak and dark eye are clearly visible.

Birds And Their Environments:

Ecological and Environmental Physiology of Birds J. Eduardo P. W. Bicudo, William A. Buttemer, Mark A.

Chappell, James T. Pearson, Claus Bech, 2010-04-01 Birds have colonized almost every terrestrial habitat on the planet from the poles to the tropics and from deserts to high mountain tops Ecological and Environmental Physiology of Birds focuses on our current understanding of the unique physiological characteristics of birds that are of particular interest to ornithologists but also have a wider biological relevance An introductory chapter covers the basic avian body plan and their still enigmatic evolutionary history The focus then shifts to a consideration of the essential components of that most fundamental of avian attributes the ability to fly The emphasis here is on feather evolution and development flight energetics and aerodynamics migration and as a counterpoint the curious secondary evolution of flightlessness that has occurred in several lineages This sets the stage for subsequent chapters which present specific physiological topics within a strongly ecological and environmental framework These include gas exchange thermal and osmotic balance classical life history parameters male and female reproductive costs parental care and investment in offspring and fecundity versus longevity tradeoffs feeding and digestive physiology adaptations to challenging environments high altitude deserts marine habitats cold and neural specializations notably those important in foraging long distance navigation and song production Throughout the book classical studies are integrated with the latest research findings Numerous important and intriguing questions await further work and the book concludes with a discussion of methods emphasizing cutting edge technology approaches and future research directions

Carabid Beetles in Their Environments H.U. Thiele, 2012-12-06 With the increasing numbers of research workers and groups of investigators devoting themselves to the ecology of carabids I felt that the time had come to take stock of the existing knowledge in this field and to endeavour to weld my personal results and those of other workers into a comprehensive picture It was with these aims in mind that the following study was conceived A further goal was to attempt to show to what extent research on carabids can contribute to the larger fields of research encompassing ecology ethology and evolution In my opinion the investigations on carabids permit us to draw conclusions of general applicability and as such comparable with those made in recent years upon other groups of animals I am well aware of the risk involved nowadays in attempting on one's own to integrate results from a wide variety of scientific disciplines into a meaningful whole and for this reason I am always grateful for corrections and for additional information It is impossible for me to mention by name all of the colleagues who have given me their support in the preparation of the book Reprints of their publications have been placed at my disposal by almost all of the authors cited as well as by others whose names and works have been omitted merely in order to prevent the book from taking on encyclopedic proportions I am nevertheless indebted to them all for their cooperation

Developing Place-responsive Pedagogy in Outdoor Environmental Education Alistair Stewart, 2020-02-25 This book is a rhizomatic curriculum autobiography that charts the author s efforts to develop and promote Australian outdoor environmental education practices that are inclusive of and responsive to the places in which they are performed Joining philosophical concepts created by Gilles Deleuze and Felix Guattari with William Pinar s autobiographical method for curriculum inquiry the author re considers the interrelated concepts contexts and complex conversations with colleagues students and others that have shaped his approach to curriculum pedagogy and research for fifteen years or more Emphasising the complexity of developing curricula and pedagogies that engage in a respectful and generative way with the natural and cultural history of the Australian continent the author explicates and enacts his attempts to think differently about the cultural curricular and pedagogical understandings that inform the practices of Australian outdoor environmental educators Outdoor environmental education in Australia has historically been influenced by imported universalist ideas particularly from the USA and the UK However during the last two decades a growing number of researchers in this field have challenged the applicability of such taken for granted approaches and advocated the development of curricula and pedagogies informed by the unique bio geographical and cultural histories of the locations in which educational experiences take place As this book demonstrates Alistair Stewart is prominent among the vanguard of Australian outdoor environmental educators who have led such

advocacy by combining practical experience with theoretical rigour **Mining Impacts and their Environmental Problems** José Marrugo Negrete, M. P. Jonathan, A. L. Ramanathan, S. Chidambaram, R. Nagarajan, Pankaj Kumar, 2025-02-12

This book entitled *Mining Impacts and their Environmental Problems* presents a comprehensive view on various mining activities and a wide spectrum of environmental challenges associated with it. Case studies presented across global south such as Asia, Africa and Latin America are the first of its kind which presents a holistic and deep insight into instead of about this pressing environmental issue. In this book thirteen chapters present various issues ranging from gold, silver, chromium, lead, coal mining and its impacts on ambient environment, soil, water, biodiversity, degradation and ultimately on healthy living environment instead of human health living in the surrounding area. For this purpose different methodologies have been used they have used different methodologies for example instead of like using like using a water quality index, hydro chemical characterization, numerical simulation to identify the extent of pollution caused by instead of due to due to mining activities. Later in the book it advocates the usage of advanced mining technologies such as advanced oxidation processes, decarbonization technologies and a biotechnological approach for the treatment of wastewater being generated due to mining activities or minimizing overall environmental degradation. Finally it emphasizes on assessing risk, zone delineation, vulnerability analysis using cutting edge tools like numerical simulation, GIS and remote sensing which will help designing robust management plans and sustainable transitions critically helpful for policy makers or decision makers.
