Chamberlain's Birds of the Indian Ocean Islands Ian Sinclair,2013-07-17 Birds of the Indian Ocean Islands is a comprehensive guide to the bird life of Madagascar the Seychelles the Comoros and the Mascarenes an area that boasts high levels of endemism This new expanded edition is fully updated to reflect taxonomic changes and now describes and illustrates 502 species The species accounts cover the birds appearance basic behaviour preferred habitats geographical distribution and IUCN threat status The text is complemented by newly designed plates with labels pinpointing key differentiating features The introduction includes maps for each island lists the region s 211 endemic species and gives pointers on where to go bird watching Conservation of Island Birds International Council for Bird Preservation. World Conference,International Council for Bird Preservation,1985 **The La Trappe Creek Chronicles** Ethan L. Welch M. D.,2008-12 The LaTrappe Creek Chronicles is a story of how a week of sailing with four friends became an annual event Friends invited friends fathers invited sons and eventually grandfathers invited grandsons joining to create enduring memories of camaraderie and adventure Thirty five years later the Society still sails for one week each year but with some ten boats and a roster of over one hundred members In these pages we celebrate the sport of sailing noting the range from racing small one design dinghies to cruising catamarans from the America s Cup to the Tucket Bucket Jet travel and charter

facilities worldwide afford new sailing grounds and catalyzed our group to sail in exotic venues and add on unique travel with spouses and friends Unusual highlights include an audience with the Pope and treading the sacred burial grounds of the gods of Polynesia The combination of sailing and travel brought a keen interest in history and ecology long before saving the oceans became so critical This is also a story of the robust education found while in the pursuit of the art and science of sailing the discipline of proper anchoring the joys of producing gourmet fare from a tiny galley the spice of philosophy the confrontation of political discourse and examining and embracing the different views on economics and cosmic exploration Most of these lessons cascading from the confines of a cockpit with brandy and cigars The Chronicles is not a how to book but there are usable observations for governance of such an organization as the LaTrappe Creek Historical and Ecological Society There are By Laws indelibly retained in the memory of the Commodore and established Archives to secure information that even the CIA or KGB could not access Above all these chronicles relate how all who have been a part of this sailing saga have experienced the joy of valued friends and unfortunately the sadness of burying old friends at sea And Oh Yes There is a real place called LaTrappe Creek and all the characters in this book are real

Rails Barry Taylor, 2010-08-30 This is a guide to rails a relatively homogeneous family of birds spread throughout the world Barry Taylor and Ber van Perlo have described and illustrated 145 species of rails including two that are newly described and also ten that are recently extinct and two that are almost certainly extinct The book based on up to date references and on new observations is the first to give comprehensive information on field identification including voice covering all species and races for which details are known It is also the first to provide descriptions of the immature and juvenile plumages of many species The authors provide a detailed summary of current knowledge of all aspects of rail biology and their often complex behaviour social structure and family life They explain how such apparently poorly flying birds can undertake intercontinental migrations and are such widespread and successful colonists of remote oceanic islands They also discuss the remarkable ease and speed with which species on such islands have evolved into flightless forms in the absence of predators a fact that has led to the rapid extinction of numerous island taxa following the arrival of man Rail habitats are fast disappearing say the authors and many rails become endangered before enough is known about them to plan effective conservation measures The book provides information on distribution status habitat requirements and current threats and it gives conservation priorities for threatened species

Naturalised Birds of the World Christopher Lever, 2010-01-29 This book looks at the world s naturalised successfully introduced species of bird Many species have been introduced to countries outside their natural range by people either deliberately or accidentally with varied consequences for both those species themselves and the native fauna of their new homes In Britain the introduced Canada Goose has quickly become ubiquitous at every lake and riverside while the Golden Pheasant remains a scarce and unobtrusive inhabitant of a few scattered remote woodlands The House Sparrow and Common Starling both in decline over parts of their native range are thriving in a naturalised state in North America and elsewhere in the world Naturalised populations of Mallard in various parts of the

world are threatening a total of seven other duck species with extinction through hybridisation This book discusses each species in turn describing how why when and where its introduction took place how it became established and the ecological and economic impacts its presence has had in the country or countries it is naturalised in Each account has a map showing natural and introduced range and there is a wealth of beautiful line drawings of the species concerned **The**

Europe Claire Voisin,2010-10-30 Although the majority of the world s Herons live in the tropics and subtropics Europe is home to nine species some large some small some colonial some solitary breeders Highly specialized birds they exhibit many interesting differences in their behaviour and ecology and are a favourite group for many ornithologists Voisin begins her book with a general description of the family before going on to treat each species in more detail The species accounts summarize such topics as field characters distribution population size breeding and feeding ecology and behaviour Numerous figures and tables are accompanied by fine drawings of behaviour by P L Suiro and colour and black and white pictures of each species by Gunnar Brusewitz **Lost Land of the Dodo** Anthony Cheke,Julian P. islands in the southern Indian Ocean Mauritius R union and Rodrigues were once home to an extraordinary range of birds and reptiles Evolving on these isolated volcanic islands in the absence of mammalian predators or competitors the land was dominated by giant tortoises parrots skinks and geckos burrowing boas flightless rails the birds and tortoises were slaughtered indiscriminately while introduced rats cats pigs and monkeys destroyed their eggs the once extensive forests logged and invasive introduced plants from all over the tropics devastated the ecosystem The now familiar icon of extinction the Dodo was gone from Mauritius within 50 years of human settlement and over the next 150 years many of the Mascarenes other native vertebrates followed suit The product of over 30 years research by Anthony Cheke Lost Land of the Dodo provides a comprehensive yet hugely enjoyable account of the story of the islands changing ecology interspersed with human stories the islands biogeographical anomalies and much else Many French publications old and new especially for R union are discussed and referenced in English for the first time The book is richly illustrated with maps and contemporary illustrations of the animals and their environment many of which have rarely been reprinted before Illustrated box texts look in detail at each extinct vertebrate species while Julian Hume s superb colour plates bring many of the extinct birds to life Lost Land of the Dodo provides the definitive account of this tragic yet remarkable fauna and is a must read for anyone
