Crack and Contact Problems for Viscoelastic Bodies G. A. C. Graham, J. R. Walton, 2014-09-01 *Analysis and Simulation of Contact Problems* Peter Wriggers, Udo Nackenhorst, 2006-08-15 Contact mechanics was and is an important branch in mechanics which covers a broad field of theoretical numerical and experimental investigations In this carefully edited book the reader will obtain a state of the art overview on formulation mathematical analysis and numerical solution procedures of contact problems The contributions collected in this volume summarize the lectures presented during the 4th Contact Mechanics International symposium CMIS held in Hannover Germany 2005 by leading scientists in the area of contact mechanics

Boundary Value Problems in Linear Viscoelasticity John M. Golden, George A.C. Graham, 2013-04-17 The classical theories of Linear Elasticity and Newtonian Fluids though triumphantly elegant as mathematical structures do not adequately describe the deformation and flow of most real materials Attempts to characterize the behaviour of real materials under the action of external forces gave rise to the science of Rheology Early rheological studies isolated the phenomena now labelled as viscoelastic Weber 1835 1841 researching the behaviour of silk threads under load noted an instantaneous extension followed by a further extension over a long period of time On removal of the load the original length was eventually recovered He also deduced that the phenomena of stress relaxation and damping of vibrations should occur Later investigators showed that similar effects may be observed in other materials The German school referred to these as *Elastische Nachwirkung* or the elastic aftereffect while the British school including Lord Kelvin spoke of the viscosity of solids The universal adoption of the term Viscoelasticity intended to convey behaviour combining proper ties both of a viscous liquid and an elastic solid is of recent origin not being used for example by Love 1934 though Alfrey 1948 uses it in the context of polymers The earliest attempts at mathematically modelling viscoelastic behaviour were those of Maxwell 1867 actually in the context of his work on gases he used this model for calculating the viscosity of a gas and Meyer 1874

Advances in Mechanics of Time-Dependent Materials Holm Altenbach, Julius Kaplunov, Hongbing Lu, Masayuki Nakada, 2023-03-09 This book presents current trends in Mechanics of Time Dependent Materials It covers a number of cutting edge themes such as characterization of linear and nonlinear mechanical behavior of viscoelastic materials and their composites taking into consideration large deformations low moderate and large strain rates as well as failure and fracture phenomena The contributions are inspired by advanced applications in modern technologies such as injection molding and extrusion

Bogdanov, Vladimir M. Nazarenko, 2020-07-25 This book addresses the problems of fracture mechanics of materials with cracks under the loading directed along the cracks It considers two non classical fracture mechanisms namely the fracture of bodies compressed along cracks and the fracture of materials with initial residual stresses acting in parallel to the surfaces of cracks location and presents new approaches also including combined one developed in the framework of three dimensional linearized mechanics of deformable bodies It then discusses the results of studies on two and three dimensional problems for various configurations of crack locations in isotropic and anisotropic materials and based on these results critically evaluates the accuracy and applicability limits of the beam approximation approach which is widely used to study various problems of the fracture of bodies under compression along parallel cracks

Handbook of Differential Equations: Evolutionary Equations C.M. Dafermos, Eduard Feireisl, 2005-10-05 The aim of this Handbook is to acquaint the reader with the current status of the theory of evolutionary partial differential equations and with some of its applications Evolutionary partial differential equations made their first appearance in the 18th century in the endeavor to understand the motion of fluids and other continuous media The active research effort over the span of two

centuries combined with the wide variety of physical phenomena that had to be explained has resulted in an enormous body of literature. Any attempt to produce a comprehensive survey would be futile. The aim here is to collect review articles written by leading experts which will highlight the present and expected future directions of development of the field. The emphasis will be on nonlinear equations which pose the most challenging problems today. Volume I of this Handbook does focus on the abstract theory of evolutionary equations. Volume 2 considers more concrete problems relating to specific applications. Together they provide a panorama of this amazingly complex and rapidly developing branch of mathematics.

Dynamic Failure of Materials H.P. Rossmannith, Ares J. Rosakis, 2012-12-06. The rapid pace of current developments in the theoretical analytical numerical and experimental fields of dynamic failure of materials called for an international seminar of workshop style aimed at improving the finding and understanding of solutions to the basic physical processes involved in dynamic failure. The Vienna Seminar DFM I was held at the Technical University Vienna in the historic administration building in the city center under the auspices of the university. More than 30 international experts from all over the world followed the invitation to participate at this seminar. High in the list of priorities was the common desire for ample time for discussions after each technical presentation a fact and a chance frequently made overextensive use of during the seminar. Thus opportunity was given to the seminar participants to present and expose ideas and results of their original research work either terminated ongoing proposed or conceived and intended to an international forum of experts for critical discussions evaluation and appraisal. The technical program included dynamic failure of polymers and steel numerical modelling of fracture processes experimental techniques and analytical numerical investigation of crack wave interaction problems. The scope of the contributions stretched from implementation of advanced mathematical techniques in the theoretical developments to most direct applications in various fields of engineering practice. Papers published in this volume represent revised updated and expanded versions of the seminar contributions.
