Meet animals of every color of the rainbow and find out why they are the colors and patterns they are. Discover the reason why some animals are stripy and others are spotty. Why do some creatures deliberately pop out while others strive to blend in? Why are some bright to warn off others while some only pretend to look toxic? Why are some male animals so much more flamboyant than their female counterparts? Why do some babies look so different from the grown-ups in their families? The animal kingdom is explored like never before in this richly detailed natural history book bursting with life and color. Are we mere material mechanisms? Or is life a vast nonphysical dimension that organizes matter? Does God exist? The issue is not academic. The question defines the nature of human reality. What are the limits of consciousness? Do our memories exist in our brains or in the vastness of time? *The Vital Dimension* examines the thoughts of eminent scientists such as the Nobel Prize winners Erwin Schrödinger, Werner Heisenberg, and Sir John Eccles, who concluded that life is a mysterious force unknown to modern science. *The Vital Dimension* embraces René Descartes' admonition: Doubt all that can be doubted to look beyond the rigid preconceptions of mechanistic biology and construct a truly radical theory of life. More than
