Bird Census Techniques Colin J. Bibby, Neil D. Burgess, David A. Hill, 2012-12-02 Wild birds are counted for a wide variety of reasons and by a bewildering array of methods However detailed descriptions of the techniques used and the rationale adopted are scattered in the literature and the newcomer to bird census work or the experienced bird counter in search of a wider view may well have difficulty in coming to grips with the subject as a whole While not an end in itself numerical and distributional census work is a fundamental part of many scientific and conservation studies and one in which the application of given standards is vital if results are not to be distorted or applied in a misleading way This book provides a concise guide to the various census techniques and to the opportunities and pitfalls which each entails The common methods are described in detail and illustrated through an abundance of diagrams showing examples of actual and theoretical census studies Anyone with a bird census job to plan should be able to select the method best suited to the study at hand and to apply it to best effect within the limits inherent in it and the constraints of the particular study The Royal Society for the Protection of Birds and the British Trust for Ornithology have for many years pioneered the collaboration of amateurs and professionals in various census studies Three members of their staff each with extensive field experience now pool the knowledge of these investigations to lay the groundwork for sound census work in future years

Orientation in Birds P. Berthold,2013-03-08 If it is true that science proceeds from a romantic through a scientific to a technological stage then research on bird orientation is certainly on its move from its first to its second grade and recent developments in radiotelemetry and satellite tracking of migrating birds might already indicate the advent of the third stage At this juncture Orientation in Birds is a timely account Even though the study of animal migration in general and bird navigation in particular has produced a literature of impressive proportions the threads provided by the plethora of research papers review articles and symposiums volumes have not yet been knitted into a theoretical fabric This is partly due to our still incomplete understanding of fundamen tal topics in avian navigation The answer to the most intriguing question of how a bird displaced to unknown territory finds its way back home is as obscure now as it was a few decades ago Whether and how birds solve this problem by using far ranging grid maps or more local familiar area maps as has been proposed off and on is still a matter of heated debates These debates frequently center around provocative hypotheses let alone the question about the physical topographic magnetic infrasonic olfactory parameters which might constitute such maps
