The Beast in the Mosquito, 2016-10-11 The correspondence between Sir Ronald Ross 1857 1932 and Sir Patrick Manson 1844 1922 is rich in both scientific and human terms It records in great detail Ross s research in India between 1895 and 1899 which elucidated the role of mosquitoes in the transmission of malaria work for which Ross was awarded the 1902 Nobel Prize for Medicine or Physiology Ross described the mosquito transmission theory as Manson s Grand Induction and he had returned to India where he was an officer in the Indian Medical Service having been primed by Manson Ross s regular letters to his mentor document the frustrations and false trails as well as the excitement of discovery Manson in turn acted as a kind of agent in London publicising his findings offering advice and seeking to use his influence to secure for Ross the working conditions he so desired These 173 letters plus 85 from the two decades after Ross s return to Britain also record the rise and fall of a relationship as Ross s preoccupation with his place in the history of malariology led to a breach between the two men Themes of priority nationalism and personal vanity punctuate this latter correspondence which also reveals new insights about the golden years of tropical medicine Ross included some of the correspondence in his Memoirs but most of it appears here fully annotated for the first time

Ecoimmunology Gregory Demas, Randy Nelson, 2012-01-17 The role of parasites and pathogens in the evolution of life history traits is of increasing interest to both ecologists and evolutionary biologists Immunology which was once studied almost exclusively by immunologists has become an important area of proximate investigation to animal physiologists as a means for understanding changes in disease susceptibility and the neural and neuroendocrine mechanisms that mediate these changes The coalescence of these different perspectives has given rise to the field of ecological immunology an interdisciplinary research field that examines interactions among host physiology and disease ecology in a wide range of environmentally relevant contexts The goal of ecological immunology is to understand immune function in the context of life history traits across a wide range of organisms Research within the field combines diverse approaches from a wide range of scientific disciplines including evolution ecology and life history theory to endocrinology neuroscience molecular biology and behavior This book critically reviews recent advances in the discipline of ecoimmunology Chapters are written by experts in their respective fields and cover diverse topics including how environmental factors can affect host immune function the complex dynamics among host immunity pathogen prevalence and disease susceptibility and the physiological mechanisms that lead to adaptive changes in immune responses By integrating analyses of immune system function within animal biology investigators will gain a more comprehensive and satisfying understanding of organism environment interactions at both ultimate and proximate levels of analysis
