*Where to Watch Birds in Africa* Nigel Wheatley, 2014-07-14 *Where to Watch Birds in Africa* is a field guide designed to help birders and general wildlife enthusiasts organize the most enriching trips possible throughout this great continent From Morocco to Madagascar this book presents over 200 bird watching sites in detail and describes the species endemic to Africa The traveler will find practical information on climate transportation accommodations health and safety as well as advice on a number of strategic questions Where can we see birds that epitomize the continent Which country supports the best cross

section of species and the most endemics How many sites must be visited to see most of these birds How much time do these trips take and when is the best time to go Featuring over one hundred maps and fifty one line drawings this book is not only a guide but also a handy reference Following a chapter on how to use the book there is an introduction to the continent and its birds The countries archipelagos and islands are then dealt with alphabetically General introductions to each country are followed by site details which include bird lists a list of other wildlife present if applicable and the latest information on where to look for the best birds Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 *Parrots* Noel F. R. Snyder, 2000 *Waterbirds Around the World* G. C. Boere, Colin A. Galbraith, David A. Stroud, 2006 This book is the outcome of a major international conference on waterbirds held in Edinburgh in April 2004 *A Field Guide to the Birds of China* John Ramsay MacKinnon, Karen Phillipps, 2000-06-08 China is one of the largest countries in the world covering 7% of the earth's land surface and encompassing a hugely diverse range of habitats As a result it boasts a rich and diverse avifauna including some of the most spectacular and fascinating birds to be found anywhere in the world This is the first truly comprehensive taxonomically modern and fully illustrated field guide to the Chinese birds Over 1300 species are illustrated in 128 colour paintings and fully described in the text Colour distribution maps are provided for all illustrated species The authors have both lived and worked in the region for many years and have extensive experience of writing and illustrating bird guides This important book will be a landmark in field guide publishing **The Birds of Northern Melanesia** Ernst Mayr, Jared M. Diamond, 2001 Speciation is the process by which co existing daughter species evolve from one ancestral species e.g. humans chimpanzees and gorillas arising from a common ancestor around 5 000 000 years ago However many questions about speciation remain controversial The Birds of Northern Melanesia provides by far the most comprehensive study yet available of a rich fauna composed of the 195 breeding land and fresh water bird species of the Bismarck and Solomon Archipelagoes east of New Guinea This avifauna offers decisive advantages for understanding speciation and includes famous examples of geographic variation discussed in textbooks of evolutionary biology The book results from 30 years of collaboration between the evolutionary biologist Ernst Mayr and the ecologist Jared Diamond It shows how Northern Melanesian bird distributions provide snapshots of all stages in speciation from the earliest widely distributed species without geographic variation to the last closely related reproductively isolated species occurring sympatrically and segregating ecologically The presentation emphasizes the wide diversity of speciation outcomes steering a middle course between one model fits all simplification and ungeneralizable species accounts Questions illuminated include why some

species are much more prone to speciate than others why some water barriers are much more effective at promoting speciation than others and whether hypothesized taxon cycles faunal dominance and legacies of Pleistocene land bridges are real These years of study have resulted in a huge database complete with distributions of all 195 species on 76 islands together with their taxonomy colonization routes ecological attributes abundance and overwater dispersal Color plates depict 88 species and allospecies many of which have never been seen before For students of speciation Northern Melanesian birds now constitute a model system against which other biotas can be compared For population biologists interested in other problems besides speciation this rich database can now be mined for insights *Megapodes* René W. R. J. Dekker, Gillian C. Baker, 2000 *Tanks and Thyme* IUCN European Programme, 1996 Large areas previously occupied by Warsaw Pact forces have been vacated in Central and Eastern Europe after the political changes in 1989 and 1990 Many of these areas are potentially rich in natural resources and variety of habitats This report identifies sites of national and international importance in four Central European countries Czech Republic Hungary Poland and Slovak Republic makes recommendations for appropriate degrees of protection and proposes management plans for a number of key sites
