Frames and Concept Types Thomas Gamerschlag, Doris Gerland, Rainer Osswald, Wiebke Petersen, 2013-11-26

This volume showcases the potential richness of frame representations. The presentation includes introductory articles on the application of frames to linguistics and philosophy of science, offering readers the tools to conduct the interdisciplinary investigation of concepts that frames allow. Introductory articles on the application of frames to linguistics and philosophy of science. Frame analysis of changes in scientific concepts. Event frames and lexical decomposition. Properties frame attributes and adjectives. Frames in concept composition. Nominal concept types and determination. This volume deals with frame representations and their relations to concept types in linguistics and philosophy of science. It aims at reviving concepts and frames as a common model across disciplines for representing semantic and conceptual knowledge. Departing from the general assumption that frames are not just an arbitrary format of representation but essential to human cognition, a number of case studies apply frames as an analytical tool to a wide range of phenomena, from changes in scientific concepts to particular linguistic phenomena. This provides new insights into long-standing semantic issues such as the lexical representation of verbs as predicative frames specifying particular event descriptions or situation types and their participants, adjectives and nominals as concept frames which provide attributes and properties of an entity as well as modification, complementation, possessive constructions, compounding, nominal concept types, determination or definiteness marking.

The Welfare of Domestic Fowl and Other Captive Birds Ian J. H. Duncan, Penny Hawkins, 2009-12-29

Animal welfare is attracting increasing interest worldwide, especially in developed countries where the knowledge and resources are available to at least potentially provide better management systems for farm animals as well as companion zoo and laboratory animals. The key requirements for adequate food, water, a suitable environment, appropriate companionship, and good health are important for animals kept for all of these purposes. There has been increased attention given to farm animal welfare in many countries in recent years. This derives largely from the fact that the relentless pursuit of financial reward and efficiency to satisfy market demands has led to the development of intensive animal production systems that challenge the conscience of many consumers in those countries. In developing countries, human survival is still a daily uncertainty, so that p

vision for animal welfare has to be balanced against human needs Animal welfare is usually a priority only if it supports the output of the animal be it food work clothing sport or companionship In principle the welfare needs of both humans and animals can be provided for in both developing and developed countries if resources are properly husbanded In reality however the inequitable division of the world s riches creates physical and psychological poverty for humans and animals alike in many parts of the world
