Birth and Death and Cybernation Paul Ryan,1973 *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office,1975 Neuromatic John Lardas Modern,2021-09-29 The story Modern tells ranges from eighteenth century brain anatomies to the MRI from the spread of phrenological cabinets and mental pieties in the nineteenth century to the discovery of the motor cortex and the emergence of the brain wave as a measurable manifestation of cognition from cybernetic research into neural networks and artificial intelligence to the founding of brain centric religious organizations such as Scientology from the deployments of cognitive paradigms in electric shock treatment to the work of Barbara Brown a neurofeedback pioneer who promoted the practice of controlling one s own brainwaves in the 1970s What Modern reveals via this grand tour is that our ostensibly secular turn to the brain is bound up at every turn with the religion it discounts ignores or actively dismisses Nowhere are science and religion closer than when they try to exclude each other at their own peril

Coevolution Quarterly ,1975 *Chromatic Algorithms* Carolyn L. Kane,2014-08-13 These days we take for granted that our
computer screens and even our phones will show us images in vibrant full color Digital color is a fundamental part of how we
use our devices but we never give a thought to how it is produced or how it came about Chromatic Algorithms reveals the
fascinating history behind digital color tracing it from the work of a few brilliant computer scientists and experimentally
minded artists in the late 1960s and early 70s through to its appearance in commercial software in the early 1990s Mixing
philosophy of technology aesthetics and media analysis Carolyn Kane shows how revolutionary the earliest computer
generated colors were built with the massive postwar number crunching machines these first examples of computer art were
so fantastic that artists and computer scientists regarded them as psychedelic even revolutionary harbingers of a better
future for humans and machines But Kane shows the explosive growth of personal computing and its accompanying need for
off the shelf software led to standardization and the gradual closing of the experimental field in which computer artists had
thrived Even so the gap between the bright bold presence of color onscreen and the increasing abstraction of its underlying
code continues to lure artists and designers from a wide range of fields and Kane draws on their work to pose fascinating
questions about the relationships among art code science and media in the twenty first century *Faith and Contexts:
