Abdel Rahman,Ravil Z. Rakhimov,Nailia R. Rakhimova,Michael I. Ojovan,2014-11-17 Cementitious materials are an essential part in any radioactive waste disposal facility Conditioning processes such as cementation are used to convert waste into a stable solid form that is insoluble and will prevent dispersion to the surrounding environment It is incredibly important to understand the long term behavior of these materials This book summarises approaches and current practices in use of cementitious materials for nuclear waste immobilisation It gives a unique description of the most important aspects of cements as nuclear waste forms starting with a description of wastes analyzing the cementitious systems used for immobilization and describing the technologies used and ending with analysis of cementitious waste forms and their long term behavior in an envisaged disposal environment Extensive research has been devoted to study the feasibility of using cement or cement based materials in immobilizing and solidifying different radioactive wastes However these research results are scattered This work provides the reader with both the science and technology of the immobilization process and the cementitious materials used to immobilize nuclear waste It summarizes current knowledge in the field and highlights important areas that need more investigation The chapters include Introduction Portland cement Alternative cements Cement characterization and testing Radioactive waste cementation Waste cementation technology Cementitious wasteform durability and performance assessment

#### **Strategy and Methodology for Radioactive Waste Characterization**

International Atomic Energy Agency,2007 Over the past decade significant progress has been achieved in the development of waste characterization as well as control procedures and equipment This has been a direct response to ever increasing requirements for quality and reliability of information on waste characteristics Failure in control procedures at any step can have important adverse consequences and may result in producing waste packages which are not compliant with the waste acceptance criteria for disposal thereby adversely impacting the repository The information and guidance included in this publication corresponds to recent achievements and reflects the optimum approaches thereby reducing the potential for error and enhancing the quality of the end product

**Selection of Efficient Options for Processing and Storage of Radioactive Waste in Countries with Small Amounts of Waste Generation** International Atomic Energy Agency,2003

Describes methodologies criteria and options for the selection of appropriate technologies for processing and storing radioactive waste A review of both technical and non technical factors important for decision making and planning and for implementation of waste management activities at the country and facility levels is presented

**Management of Waste Containing Tritium and Carbon-14** International Atomic Energy Agency,2004 This report reviews and analyses experience in the application of different organizational and technological approaches to the management of waste containing C 14 and tritium and reviews the different sources of such waste and the characteristics important in the selection of appropriate

methods for its processing storage disposal and release IAEA Bulletin ,1993

**Characterization of Radioactive Waste Forms and Packages** International Atomic Energy Agency,1997 This Safety Fundamentals publication provides a coherent set of objectives and principles for protection against ionizing radiation and for ensuring safety in the use of radiation sources The protection objective and the safety objective together with the eleven principles that have to be applied to achieve them represent an international consensus They provide the basis for the requirements in IAEA Safety Standards for the control of occupational public and medical exposures and for the safety of sources The Safety Fundamentals also provide an insight into the general system of protection and safety for those at senior levels in government and regulatory bodies and those responsible for making decisions relating to the uses of radiation in medicine industry agriculture research and other areas

**Interim Storage of Radioactive Waste Packages** International Atomic Energy Agency,1998 This report reviews past and current experience and provides valuable technical guidance on the production and interim storage of radioactive waste packages

**Application of Ion Exchange Processes for the Treatment of Radioactive Waste and Management of Spent Ion Exchangers** ,2002 Ion exchange is one of the most common and effective treatment methods for liquid radioactive waste Various aspects of ion exchange technology are being actively studied in many countries to improve efficiency and economy Spent ion exchangers are considered to be problematic waste that in many cases requires special approaches and precautions during its immobilization to meet the acceptance criteria for disposal This books reviews and updates the current literature on the subject and reports on the existing state of the art of the application of ion exchange processes for liquid radioactive waste treatments and of the management of spent ion exchange media

**Predisposal Management of Organic Radioactive Waste** International Atomic Energy Agency,2004 A wide variety of organic radioactive waste is generated at different nuclear fuel cycle facilities as well as during different nuclear applications including medicine research agriculture industry education and training Processing of organic waste for storage and disposal requires specific approaches In many cases application of special techniques to destroy organic components of waste or to provide reliable immobilization to isolate organic waste from the environment is required The processing of organic waste is a rapidly developing field Various treatment and conditioning options are being investigated developed and widely applied in several IAEA Member States This report revises and summarizes available information on different treatment and conditioning options applied for predisposal management of organic radioactive waste

**Processes in Radioactive Waste Repository and in Nuclear Fuel Storage Areas** J.H. Wolfram,Robin D. Rogers,Lajos G. Gázsó,1997-03-31 Purpose ofthe Workshop In the spirit of enhancing developments in science and technology by facilitating international scientific cooperation the Science Committee of NATO is sponsoring AR W s in several selected priority areas The objective of this workshop was to discuss what microbial mediated problems have been experienced in the area of nuclear waste management and spent fuel storage Long term storage of high level wastes in repositories is just starting in

some countries However low and medium level wastes have been stored for several decades In the area of spent fuel interim storage has been extended at many locations far beyond the intended time It was a priority of the workshop to examine and discuss what deleterious effects have been observed under these storage conditions or under conditions used in simulated trial tests for predicting material performance under the storage conditions For example one chronic problem that was discussed was possibility that microbial influenced corrosion MIC could be taking place in the wet storage of spent fuel thereby initiating or accelerating the process of corrosion Another discussion in the area of waste forms focused on the presence of biofilms which may be breaking down the structure of the waste form and thereby jeopardizing its integrity The meeting focused on discussing the observations and data collected relating to problems encountered in the storage of these types of wastes and sharing this information with others that have not monitored their facilities for similar problems
