Last, 2013-11-11 Several year ago we edited a casebook on behavior therapy with children The book appeared to fill a gap in the existing child literature and was quite well received A similar gap appears to exist in the behavioral literature for adult cases in that there are very few adult case books currently available The present book was developed in order to devote an entire casebook to both standard and more innovative clinical applications of behavioral treatments to adult problems The book containing 19 chapters is divided into two parts In the first part in a chapter entitled Clinical Considerations we discuss a variety of clinical issues that are of importance to designing and executing behaviorally based interventions with adults The bulk of the book the remaining 18 chapters contains a variety of cases presented by our experts Each of the treatment cases is presented using the same format in order to increase consistency and comparability across chapters Specific sections for each chapter are as follows 1 Description of the Disorder 2 Case Identification 3 Presenting Complaints 4 History 5

Assessment 6 Selection of Treatment 7 Course of Treatment 8 Termination 9 Follow up and 10 Overall Evaluation Thanks are extended to our many expert contributors without whom this book would not be possible We also wish to acknowledge the technical support of Mrs Kim Sterner Finally we thank our editor at Plenum Eliot Werner for his support and forbearance in the face of the inevitable delays Behavior Therapy Casebook Michel Hersen, Cynthia G. Handbook of Pain and Aging David I. Mostofsky, Jacob Lomranz, 2013-11-11 From time to time professional journals and edited volumes devote some of their pages to considerations of pain and aging as they occur among the aged in different cultures and populations One starts from several reasonable assumptions among them that aging per se is not a disease process yet the risk and frequency of disease processes increase with ongoing years The physical body s functioning and ability to restore all forms of damage and insult slow down the immune system becomes compromised and the slow growing pathologies reach their critical mass in the later years The psychological body also becomes weaker with unfulfilled promises and expectations and with tragedies that visit individuals and families and the prospect that whatever worlds remain to be conquered will most certainly not be met with success in the rapidly passing days and years that can only culminate in death Despair and depression coupled with infirmity and sensory and or motor inefficiency aggravate both the threshold and the tolerance for discomfort and synergistically collaborate to perpetuate a vicious cycle in which the one may mask the other Although the clinician is armed with the latest advances in medicine and pharmacology significant improvement continues to

elude her or him The geriatric specialist all too familiar with such realities usually can offer little else than a hortative to learn to live with it but the powers and effectiveness of learning itself have declined
