*Incipient Productivity* Arne Zeschel, 2012-04-02 How do speakers vary established patterns of language use and adapt them to novel contexts of application This study presents a usage based approach to linguistic creativity combining detailed qualitative with large scale quantitative analyses of corpus data it traces the emergence of partial productivity in clusters of conventional collocations Focusing on English and German intensification constructions it proceeds in three steps having first inventoried the lexical means of a given semantic type that are recruited for signalling intensity in both languages collostructional analysis is then used to identify entrenched intensity collocations involving these formatives in three different syntactic constructions Third multi rater manual classification methods as well as distribution based automatic classification methods are employed to uncover semantic generalisations over the attested types on different levels of abstraction Collocational expansion is shown to proceed through local analogies within sets of semantically similar stored instances of a construction Synthesising insights from research on language acquisition variation and change it is thus argued that creative extensions of linguistic conventions are intrinsically bound up with aspects of memory and repetition **Rules of the Road, International-inland** United States.
