Urban Heat Island (UHI) Mitigation Napoleon Enteria,Matteos Santamouris,Ursula Eicker,2020-12-14 This book discusses the concepts and technologies associated with the mitigation of urban heat islands UHIs that are applicable in hot and humid regions It presents several city case studies on how UHIs can be reduced in various areas to provide readers researchers and policymakers with insights into the concepts and technologies that should be considered when planning and constructing urban centres and buildings The rapid development of urban areas in hot and humid regions has led to an increase in urban temperatures a decrease in ventilation in buildings and a transformation of the once green outdoor environment into areas full of solar energy absorbing concrete and asphalt This situation has increased the discomfort of people living in these areas regardless of whether they occupy concrete structures This is because indoor and outdoor air quality have both suffered from urbanisation The development of urban areas has also increased energy consumption so that the occupants of buildings can enjoy indoor thermal comfort and air quality that they need via air conditioning systems This

book offers solutions to the recent increase in the number of heat islands in hot and humid regions
