Blood Cell Biochemistry Vol 3 Lymphocytes And Granulocytes:

Blood Cell Biochemistry Volume 3 J. Robin Harris, 2013-11-11 This is the third volume of the Blood Cell Biochemistry series follows the pattern established in the two previous volumes by containing up to date specialist reviews of topics of current interest within the field of study defined by the subtitle Thus the topics included can be loosely classified under the broad subtitle Lymphocytes and Granulocytes but this does not indicate the full scope of content scientific interest and emphasis of the present volume The opening chapter by Antonio Bonati surveys the currently available biochemical immunological and molecular markers of hemopoietic precursor cells This is followed appropriately by a contribution from Arnold S Freedman on the cell surface markers in leukemia and lymphoma In a detailed chapter Annette Schmitt Graff and Giulio Gabbiani discuss the cytoskeletal organization of normal and leukemic lymphocytes and lymphoblasts John C Cambier and his colleagues then present a discussion of the signaling events in T lymphocyte dependent B lymphocyte activation Lymphocyte IgE receptors and IgE binding factors are dealt with by Kwang Myong Kim and his colleagues and the role of granule mediators in lymphocyte mediated cytotoxicity is covered by John Ding E Young and his associates A short contribution from James D Katz deals with the intricacies and difficulties of studies on the complement C3b CR1 receptor and its cytoskeletal interactions in neutrophils Arthur K Sullivan then presents an in depth survey of the membrane biochemistry surrounding the flow of granule organelles in leukocyte differentiation Neutrophils, The: New Outlook For Old Cells Dmitry I Gabrilovich, Denis English, J Heinecke, Jay Louis Zweier, A Ferrante, Charles S T Hii, Zhi H Huang, Deborah A Rathjen, Marco Cassatella, N F Fanning, H P Redmond, D Bouchier-hayes, Antal Rot, G Virella, Robert L Roberts, David C Dale, S Nelson, R Strauss, 1999-03-26 This invaluable volume written by group of internationally established scientists presents an overview of the most recent findings on the biology of neutrophils These cells have become a focus of attention in recent years because of their fascinating biochemistry and molecular biology and their ability to affect the functions of other cells The book describes in detail the molecular events leading to neutrophil activation migration microbial killing production of oxidative radicals and cytokines and eventually to the death of these cells It presents new information that has never been discussed in monographs before It also gives a unique overview of the neutrophil's role in viral diseases including Aids Finally the book describes how to improve the function of neutrophils and use these cells in the treatment of diseases

Research Grants Index National Institutes of Health (U.S.). Division of Research Grants, 1972 Leukocyte Typing II Ellis L. Reinherz, Barton F. Haynes, Lee M. Nadler, Irwin D. Bernstein, 2012-12-06 The Second International Workshop on Human Leukocyte Differentiation Antigens was held in Boston September 17-20 1984 More than 350 people interested in leukocyte differentiation agreed to exchange reagents and participate in this joint venture All in all in excess of 400 antibodies directed against surface structures on T lymphocytes B lymphocytes and myeloid hematopoietic stem cells were characterized Because of the enormous quantity of serologic biochemical and functional data Leukocyte Typing II has been

divided into three volumes These books represent the written results of workshop participants They should be helpful to both researchers and clinicians involved in scientific endeavors dealing with these broad fields of immunobiology To those who delve into the various sections of the volumes it will become evident that the work speaks for itself I am deeply indebted to the section editors Barton F Haynes Volume 1 Human T Lymphocytes Lee M Nadler Volume 2 Human B Lymphocytes and Irwin D Bernstein Volume 3 Human Myeloid and Hematopoietic Cells for their major contributions in planning executing and summarizing the workshop as well as council members John Hansen Alain Bernard Laurence Boumsell Walter Knapp Andrew McMichael Cesar Milstein and Stuart F Schlossman I would also like to thank the National Institutes of Health World Health Organization and International Union of Immunological Societies for making this meeting possible

Molecular Basis of Human Blood Group Antigens Jean-Pierre Cartron, Philippe Rouger, 2013-06-29 The science of blood groups was born at the beginning of this century when the field of immunology married that of genetics Most of the subsequent progress in immunogenetics was achieved by British investigators The six consecutive editions of the unequalled Blood Groups in Man have long been considered as the bible of blood groupers It is quite unfortunate that this book has not been revisited since 1975 Although one cannot do without immunogenetics which remains useful for the identification of new blood groups and genetic studies the focus of interest has moved somewhat today After several decades the molecular basis of blood groups can be investigated by biochemists From 1950 to 1980 the ABO Hh and Lewis blood groups served as models and their chemical basis came to be established The red cell membrane glycoproteins carrying the MN and Ss antigens and the glycolipids with P blood group specificities were also identified and characterized The chemical basis of the other groups however remained largely unknown

Basophil and Mast Cell Degranulation and Recovery Ann M. Dvorak, 2013-06-29 Basophils and mast cells are similar but unique secretory cells with a well documented role in immediate hypersensitivity reactions The presence of these cells in various cell mediated hypersensitivity reactions in tissues of multiple diseases and as a component of the host reaction to injury and repair in numerous circumstances is well known Release of stored and newly generated mediators of inflammation from basophils and mast cells contributes to the cascade of pathogenetic events in circumstances under which these release reactions occur Despite insights acquired through studies of these pathologic events the role of basophils and mast cells and their secretory products in health is not known In this book I review much of the structural information regarding basophils and mast cells of multiple species Ultrastructural studies of rat mast cells historically precede and quantitatively exceed similar studies of basophils and mast cells of other species Therefore I first review these background studies as an entity Then I discuss the contents of two prominent organelles granules and lipid bodies in basophils and mast cells of several species The ultrastructural morphology of basophils and mast cells in three species is presented in detail to establish appropriate guidelines for their recognition and to provide general rules for analysis which are appropriate for the identification of these cells in other species as well

Macrophages and Related Cells Michael A. Horton, 2013-06-29 To produce a comprehensive overview of macrophages and related cell types in a short review volume is an impossible task When I selected the topics to be included some equally important areas were omitted by necessity and for this I apologize My choices have been somewhat eclectic touching subjects of personal interest such as osteoclast biology and macrophage electrophysiology or of current fashion apoptosis antigen processing cell adhesion molecules The book has also had to encompass areas of a more general flavor to provide balance for the general reader such as reviews of macrophage

Megakaryocytes, Platelets, Macrophages, and Eosinophils J. Robin Harris, 2013-06-29

Blood Cell Biochemistry was initially conceived as part of the Plenum series Subcellular Biochemistry from which it has developed into a separate series The present volume is devoted primarily to contributions on megakaryocytes and platelets and to a lesser extent to macrophages and eosinophils The book does not attempt a rigorous or total coverage of the particular topics it represents the areas of current scientific activity and interest that were selected by the editor at the commencement of this project In general the approach has been similar to that adopted for Volume 1 of the series Erythroid Cells the same approach will be followed subsequently in Volume 3 Lymphocytes and Granulocytes This book opens with a developmentally oriented chapter by Janine Breton Gorius on megakaryocyte maturation and platelet release in normal conditions which serves to set the scene ultrastructurally for much of the data that follow The biosynthesis and processing of platelet glycoproteins in megakaryocytes is dealt with by Alain Duperray and his colleagues and thereby provides an in depth biochemical survey of the megakaryocyte The applications and strengths of crossed immunoelectrophoresis for the study of platelet membrane proteins is then covered by Simon Karparkin and a detailed account of the hereditary disorders of platelet function is provided by Francine Rendu and Evelyne Dupuy

Cumulated Index Medicus, 1976

The Role of Glycans in Immune Cell Functions Jasmeen S. Merzaban, Monica M. Burdick, Charles J. Dimitroff, 2020-05-26

Glycans represent a major constituency

of post translational modifications that occur on most if not all proteins Whether on mammalian or invertebrate cell surfaces they exist as sugar chain moieties designed from the exquisite and coordinated activity of cell specific glycosylation Some of the more common glycan structures are linked to cell surface polypeptides via an asparagine N linked residue or a serine threonine O linked residue along with a notable contingent found linked to ceramides in the lipid bilayer known as glycosphingolipids These glycans can associate with complementary glycan binding proteins GBP or lectins to mediate and translate this carbohydrate recognition to cell function In immunity there is increasing evidence that precise immune cell glycans are recognized by corresponding GBPs in a cell intrinsic or extrinsic manner Unique carbohydrate recognition domains within GBPs are comprised of precisely spaced amino acid functional groups that allow for selective engagement of a particular glycan target This structure function relationship is present in immune signaling pathways whereby glycans and GBPs on the surface of immune cells and non immune cells help control processes such as immune cell activation recognition of pathogens suppression and tissue specific migration The diversity of glycan structures and glycosylation among individual immune cell subsets is controlled by the expression of genes involved in glycan biosynthesis including glycosyltransferases glycosidases glycan precursor biosynthetic enzymes and nucleotide sugar transporters These genes represent more than 3% of the human genome and cell specific expression of these genes dictates a cell s glycan repertoire ultimately influencing its molecular interactions with GBPs Altogether these emerging lines of investigation highlight the regulatory capacity of glycans in immune health and disease which in turn pave the way for novel diagnostic prognostic and therapeutic strategies

Erythroid Cells J. Robin Harris, 2013-06-29 This series of books devoted to aspects of blood cell biochemistry development immunology and ultrastructure has evolved and separated from the long established Plenum series Subcellular Biochemistry It is the intention of these volumes to draw together related areas of investigation and to provide in the fullness of time complete coverage of this rapidly advancing important biomedical discipline Both fundamental and medically applied topics dealing with normal and pathological cells will be included This the first volume of the series contains a diverse collection of chapters all of which relate to erythroid cells The range of material included is extremely broad and the authors have used contrasting technical approaches both within their personal experimental studies and within their manuscripts This has led to the production of a very interesting compilation which does nevertheless possess a strong overall thematic unity As with all edited volumes some topics of importance and interest are not included This may be because of oversight on my part as editor or because the authors originally selected failed to submit their manuscript by the agreed upon submission date For these omissions I take full responsibility and trust that at least some of the topics omitted for instance membrane cation transport systems will be covered within a future volume of the series This book commences with two chapters of a developmental nature
