speculating on when how and why these states were founded My main thesis is that the modern gas exchangers are products of protracted processes that have entailed adaptation to specific environments and lifestyles Only those feasible designs that have proven adequately competent in meeting demands for molecular oxygen have been preserved Unfortunately August Krogh's Krogh 1941 and Pierre Dejours Dejours 1975 seminal works on the comparative physiology of the respiratory organs have not been paralleled by equally extensive and detailed morphological work Our approach has been to look into the limiting functional properties as regards the respiratory capacities of gas exchangers while finding out the specific structural adaptations that have evolved to meet the metabolic needs or to look into form and to discern how it limits function This has allowed a deduction of structure function correlation
