

The following result follows from [21, Proposition 3.9]. There it is assumed the C^* -algebra is unital, but we include a weakened version of the result so that it is clear that this assumption can be dropped.

Proposition 2.4. *Let E be a Hilbert A -module and let $(g_i)_{i=1}^l$ and $(h_i)_{i=1}^l$ be sequences in E . If*

$$f = \sum_{i=1}^l \bullet(f, g_i) h_i$$

for all $f \in E$, then $(h_i)_{i=1}^l$ is a frame for E .

The modules of interest in this paper will be Morita equivalence bimodules. For a reference on Morita equivalence of C^* -algebras we refer the reader to [31].

Definition 2.5. Let A and B be C^* -algebras. A Morita equivalence bimodule between A and B , or an A - B -equivalence bimodule, is a Hilbert A - B -bimodule E satisfying the following conditions:

(1) $\bullet\langle E, E \rangle = A$ and $\langle E, E \rangle_\bullet = B$, where $\bullet\langle E, E \rangle = \text{span}_{\mathbb{C}}\{\bullet\langle f, g \rangle \mid f, g \in E\}$ and likewise for $\langle E, E \rangle_\bullet$.

(2) For all $f, g \in E$, $a \in A$ and $b \in B$,

$$\langle af, g \rangle_\bullet = \langle f, a^*g \rangle_\bullet \text{ and } \bullet\langle fb, g \rangle = \bullet\langle f, gb^* \rangle.$$

(3) For all $f, g, h \in E$,

$$\bullet\langle f, g \rangle h = f \langle g, h \rangle_\bullet.$$

Now let $\mathcal{A} \subset A$ and $\mathcal{B} \subset B$ be dense Banach $*$ -subalgebras such that the enveloping C^* -algebra of \mathcal{A} is A , and the enveloping C^* -algebra of \mathcal{B} is B . Suppose further that there is a dense \mathcal{A} - \mathcal{B} -inner product submodule $\mathcal{E} \subset E$ such that the conditions above hold with $\mathcal{A}, \mathcal{B}, \mathcal{E}$ instead of A, B, E . In that case we say \mathcal{E} is an \mathcal{A} - \mathcal{B} -pre-equivalence bimodule.

We have the following important result. A proof can be found in [3, Proposition 2.11], but the

Homotopy Theory of Diagrams Wojciech Chachólski, Jérôme Scherer, 2002 In this paper the authors develop homotopy theoretical methods for studying diagrams In particular they explain how to construct homotopy colimits and limits in an arbitrary model category The key concept introduced is that of a model approximation A model approximation of a category \mathcal{C} with a given class of weak equivalences is a model category \mathcal{M} together with a pair of adjoint functors $\mathcal{M} \rightleftarrows \mathcal{C}$ which satisfy certain properties The key result says that if \mathcal{C} admits a model approximation then so does the functor category $\text{Fun}(\mathcal{I}, \mathcal{C})$

Abstract Band Method via Factorization, Positive and Band Extensions of Multivariable Almost Periodic Matrix Functions, and Spectral Estimation

L. Rodman, Ilya M. Spitkovskii, Hugo Jan Woerdeman, 2002 In this work versions of an abstract scheme are developed which are designed to provide a framework for solving a variety of extension problems The abstract scheme is commonly known as the band method The main feature of the new versions is that they express directly the conditions for existence of positive band extensions in terms of abstract factorizations with certain additional properties The results prove amongst other things that the band extension is continuous in an appropriate sense

Triangulations of Oriented Matroids Francisco Santos, 2002 We consider the concept of triangulation of an oriented matroid We provide a definition which generalizes the previous ones by Billera Munson and by Anderson and which specializes to the usual notion of triangulation or simplicial fan in the realizable case Then we study the relation existing between triangulations of an oriented matroid \mathcal{M} and extensions of its dual \mathcal{M}^* via the so called lifting triangulations We show that this duality behaves particularly well in the class of Lawrence matroid polytopes In particular that the extension space conjecture for realizable

oriented matroids is equivalent to the restriction to Lawrence polytopes of the Generalized Baues problem for subdivisions of polytopes We finish by showing examples and a characterization of lifting triangulations
