Clinical Nuclear Cardiology: State of the Art and Future Directions E-Book Barry L. Zaret, George A. Beller, 2010-04-13
Clinical Nuclear Cardiology now in its fourth edition covers the tremendous clinical growth in this field focusing on new instrumentation and techniques Drs Barry L Zaret and George A Beller address the latest developments in technology radiopharmaceuticals molecular imaging and perfusion imaging Thoroughly revised to include 20 new chapters Digital Fast SPECT Imaging in Revascularized Patients and more this new edition provides state of the art guidance on key areas and hot topics with stunning visuals Online access to the fully searchable text at expertconsult.com includes highly illustrated case studies that let you see the problem using a variety of imaging modalities In other words this is an invaluable resource no clinician or researcher in nuclear cardiology should be without Features an editorial and contributing team of worldwide leaders in nuclear cardiology to provide you with current and authoritative guidance Includes a section focusing on acute coronary syndromes to provide you with practical management tools for these conditions Presents a full color design that allows color images to be integrated throughout the text Includes access to the fully searchable contents of the book online at expertconsult.com along with highly illustrated case studies that let you see the problem using a variety of imaging modalities Features 20 new chapters including Cellular Mechanisms of Tracer Uptake and Clearance Attenuation Scatter Corrections Clinical Aspects Hybrid Imaging Digital Fast SPECT Imaging in Revascularized Patients and more Focuses on perfusion imaging in a section dedicated to this hot topic so you get all the information you need to stay current **3D Imaging, Analysis and Applications** Yonghuai Liu, Nick Pears, Paul L. Rosin, Patrik Huber, 2020-09-11 This textbook is designed for postgraduate studies in the field of 3D Computer Vision It also provides a useful reference for industrial practitioners for example in the areas of 3D data capture computer aided geometric modelling and industrial quality assurance This second edition is a significant upgrade of existing topics with novel findings Additionally it has new material covering consumer grade RGB D cameras 3D morphable models deep learning on 3D datasets as well as new applications in the 3D digitization of cultural heritage and the 3D phenotyping of crops Overall the book covers three main areas 3D imaging including passive 3D imaging active triangulation 3D imaging active time of flight 3D imaging consumer RGB D cameras and 3D data representation and visualisation 3D shape analysis including local descriptors registration matching 3D morphable models and deep learning on 3D datasets and 3D applications including 3D face recognition cultural heritage and 3D phenotyping of plants 3D computer vision is a rapidly advancing area in computer science There are many real world applications that demand high performance 3D imaging and analysis and as a result many new techniques and commercial products have been developed However many challenges remain on how to analyse the captured data in a way that is sufficiently fast robust and accurate for the application Such challenges include metrology semantic segmentation classification and recognition Thus 3D imaging analysis and their applications remain a highly active research field that will

continue to attract intensive attention from the research community with the ultimate goal of fully automating the 3D data capture analysis and inference pipeline *Global Riemannian Geometry: Curvature and Topology* Ana Hurtado, Steen Markvorsen, Maung Min-Oo, Vicente Palmer, 2020-08-19 This book contains a clear exposition of two contemporary topics in modern differential geometry distance geometric analysis on manifolds in particular comparison theory for distance functions in spaces which have well defined bounds on their curvature the application of the Lichnerowicz formula for Dirac operators to the study of Gromov's invariants to measure the K theoretic size of a Riemannian manifold It is intended for both graduate students and researchers The Official Guide of the Railways and Steam Navigation Lines of the United States, Porto Rico, Canada, Mexico and Cuba ,1881 **The Official Railway Guide** ,1878 *Scientific and Technical Aerospace Reports* ,1986 **Advances in Intelligent Data Analysis XVIII** Michael R. categories point clusters groups of contours road networks river networks continuous areal features and discrete areal features Discussing the methods and algorithms in map generalization in equal measure it also describes the approaches for describing map features The book is a valuable reference for graduates and researchers who are interested in cartography and geographic information science systems especially those in automated map generalization and spatial databases construction *Metals Abstracts* ,1999 Database Systems for Advanced Applications Sourav S.
