dataset from the MAGIC telescopes and comprehensively discusses the implications of pulsed TeV gamma rays for state of the art pulsar emission models Using these results the book subsequently explores new testing methodologies for Lorentz Invariance Violation in terms of a wavelength dependent speed of light The book also covers an updated search for Very High Energy VHE 100 GeV emissions from millisecond pulsars using the Large Area Telescope on board the Fermi satellite as well as a study on the promising Pulsar Wind Nebula candidate PSR J0631 The observation of VHE gamma rays is essential to studying the non thermal sources of radiation in our Universe Rotating neutron stars also known as pulsars are an extreme source class known to emit VHE gamma rays However to date only two pulsars have been detected with emissions above 100 GeV and our understanding of their emission mechanism is still lacking

Generalized Radon Transforms And Imaging By Scattered Particles: Broken Rays, Cones, And Stars In Tomography Gaik Ambartsoumian, 2023-03-14 A generalized Radon transform GRT maps a function to its weighted integrals along a family of curves or surfaces Such operators appear in mathematical models of various imaging modalities The GRTs integrating along smooth curves and surfaces lines planes circles spheres amongst others have been studied at great lengths for decades but relatively little attention has been paid to transforms integrating along non smooth trajectories Recently an interesting new class of GRTs emerged at the forefront of research in integral geometry The two common features of these transforms are the presence of a vertex in their paths of integration broken rays cones and stars and their relation to imaging techniques based on physics of scattered particles Compton camera imaging single scattering tomography etc This book covers the relevant imaging modalities their mathematical models and the related GRTs The discussion of the latter comprises a thorough exploration of their known mathematical

properties including injectivity inversion range description and microlocal analysis The mathematical background required for reading most of the book is at the level of an advanced undergraduate student which should make its content attractive for a large audience of specialists interested in imaging Mathematicians may appreciate certain parts of the theory that are particularly elegant with connections to functional analysis PDEs and algebraic geometry *Scientific and Technical Aerospace Reports* ,1990 *ESA Science Programme Missions* Arvind Parmar,Roger-Maurice Bonnet,Guido De Marchi,Pedro García-Lario,Erik Kuulkers,Göran Pilbratt,Celia Sánchez-Fernández,Maria Santos-Lleó,Norbert ScharTEL,John Zarnecki,2024-12-03 This work got its start by trying to answer the question how do you evaluate the scientific performance of the ESA s Science Programme missions For many years the decision makers responsible for the content of the ESA Science Programme have been provided with information for each mission including but not limited to the number of publications published the number of publications that are highly cited the total number of citations used various statistical metrics and the number of unique author names However this reporting only provides snapshots of these missions and was not widely distributed In this book we report on a systematic study of these metrics and their evolution with time to provide insights into mission successes and the communities exploiting the data provided by the Science Programme s missions In addition we examine the outcomes of the announcements of observing opportunities for ESA s observatory missions INTEGRAL Herschel and XMM Newton to provide insights into the evolutions of the user communities with time location and gender Finally we examine the provision of payload elements for ESA s Science Programme missions We use the number of payload investigators to give insights into the levels of contribution and exploitation of the different ESA Member States This book is open access under a CC BY license *From Black Clouds To Black Holes (Third Edition)* Jayant V Narlikar,2012-03-22 This book presents in a simple style the success story of modern astrophysics how the application of known physics to models of stars can together with the observational data help us understand what stars are made of how they live and how they die The account is non technical but scientifically accurate It is interspersed with anecdotes and analogies to make the subject matter readable and understandable even to a lay reader with some basic scientific background **Monthly Catalog of United States Government Publications** ,1961 Monthly Catalog of United States Government Publications, Cumulative Index United States.
