Valerio Acocella,2021-05-11 Volcanoes have terrified and at the same time fascinated civilizations for thousands of years Many aspects of volcanoes most notably the eruptive processes and the compositional variations of magma have been widely investigated for several decades and today constitute the core of any volcanology textbook Nevertheless in the last two decades boosted by the availability of volcano monitoring data there has been an increasing interest in the pre eruptive processes related to the shallow accumulation and to the transfer of magma approaching the surface as well as in the resulting structure of volcanoes These are innovative and essential aspects of modern volcanology and as driving volcanic unrest their understanding also improves hazard assessment and eruption forecasting So far the significant progress made in unravelling these volcano tectonic processes has not been supported by a comprehensive overview This monograph aims at filling this gap describing the pre eruptive processes related to the structure deformation and tectonics of volcanoes at the local and regional scale in any tectonic setting The monograph is organized into three sections Fundamentals Magma migration towards the surface and The regional perspective consisting of thirteen chapters that are lavishly illustrated The reader is accompanied in a journey within the volcano factory discovering the processes associated with the shallow accumulation of magma and its transfer towards the surface how these control the structure of volcanoes and their activity and ultimately improve our ability to estimate hazard and forecast eruption The potential readership includes any academic researcher and upper undergraduate student interested in volcanology magma intrusions structural geology tectonics geodesy as well as geology and geophysics in general

Microscopy of Semiconducting Materials A.G Cullis,R Beanland,2000-01-01 With IC technology continuing to advance the analysis of very small structures remains critically important *Microscopy of Semiconducting Materials* provides an overview of advances in semiconductor studies using microscopy The book explores the use of transmission and scanning electron microscopy ultrafine electron probes and EELS to investigate semiconducting structures It also covers specimen preparation using focused ion beam milling and advances in microscopy techniques using different types of scanning probes such as AFM STM and SCM In addition the book discusses a range of materials from finished devices to partly processed materials and structures including nanoscale wires and dots This volume provides an authoritative reference for all academics and researchers in materials science electrical and electronic engineering and instrumentation and condensed matter physics

Noncommutative Differential Geometry and Its Applications to Physics Yoshiaki Maeda,Hitoshi Moriyoshi,Hideki Omori,Daniel Sternheimer,Tatsuya Tate,Satoshi Watamura,2012-12-06 Noncommutative differential geometry is a new approach to classical geometry It was originally used by Fields Medalist A Connes in the theory of foliations where it led to striking extensions of Atiyah Singer index theory It also may be applicable to hitherto unsolved geometric phenomena and physical experiments However noncommutative differential geometry was not well understood even among mathematicians Therefore an international symposium on commutative differential geometry and its applications to physics was held in Japan in July 1999 Topics covered included

deformation problems Poisson groupoids operad theory quantization problems and D branes The meeting was attended by both mathematicians and physicists which resulted in interesting discussions This volume contains the refereed proceedings of this symposium Providing a state of the art overview of research in these topics this book is suitable as a source book for a seminar in noncommutative geometry and physics

Geometric Methods in Inverse Problems and PDE Control

Christopher B. Croke, Gunther Uhlmann, Irena Lasiecka, Michael Vogelius, 2012-12-06 This IMA Volume in Mathematics and its Applications GEOMETRIC METHODS IN INVERSE PROBLEMS AND PDE CONTROL contains a selection of articles presented at 2001 IMA Summer Program with the same title We would like to thank Christopher B Croke University of Pennsylvania Irena Lasiecka University of Virginia Gunther Uhlmann University of Washington and Michael S Vogelius Rutgers University for their excellent work as organizers of the two week summer workshop and for editing the volume We also take this opportunity to thank the National Science Foundation for their support of the IMA Series Editors Douglas N Arnold Director of the IMA Fadil Santosa Deputy Director of the IMA

PREFACE This volume contains a selected number of articles based on lectures delivered at the IMA 2001 Summer Program on Geometric Methods in Inverse Problems and PDE Control The focus of this program was some common techniques used in the study of inverse coefficient problems and control problems for partial differential equations with particular emphasis on their strong relation to fundamental problems of geometry Inverse coefficient problems for partial differential equations arise in many application areas for instance in medical imaging nondestructive testing and geophysical prospecting Control problems involving partial differential equations may arise from the need to optimize a given performance criterion e g to dampen out undesirable vibrations of a structure or more generally to obtain a prescribed behaviour of the dynamics
