All About Spacecraft:

All about Spacecraft Tracy Brown Hamilton, 2016-07-15 Through space exploration humans have learned a great deal about the planets stars and other objects in space More than five thousand spacecraft have been launched into space to gather information since 1957 Without space travel NASA may never have developed many of the things we take for granted today such as cell phone cameras CAT scans and ski boots This useful and interesting resource discusses the many types of manned and unmanned spacecraft describes how a rocket works and looks ahead to space travel s future **The**

International Handbook of Space Technology Malcolm Macdonald, Viorel Badescu, 2014-07-08 This comprehensive handbook provides an overview of space technology and a holistic understanding of the system of systems that is a modern spacecraft With a foreword by Elon Musk CEO and CTO of SpaceX and contributions from globally leading agency experts from NASA ESA JAXA and CNES as well as European and North American academics and industrialists this handbook as well as giving an interdisciplinary overview offers through individual self contained chapters more detailed understanding of specific fields ranging through Launch systems structures power thermal communications propulsion and software to entry descent and landing ground segment robotics and data systems to technology management legal and regulatory issues and project management This handbook is an equally invaluable asset to those on a career path towards the space industry as it is to those already within the industry *Spacecraft Maneuver with Performance Guaranteed* Yufeng Gao, Dongyu

Li, 2023-10-21 Facing future oriented aerospace applications large scale space construction and on orbit services have rapidly developed In such emerging and increasingly complex spacecraft maneuvering and control tasks more precise control accuracy and higher performance guarantees need to be fully considered due to the need for safe close rendezvous movements This book is dedicated to solving the aerospace system s performance guaranteed and precise control challenges with the expected transient and strict steady state constraints It is designed so that the aerospace closed loop system can theoretically meet the pre defined or prescribed performance requirements with the simple parameter selection Furthermore the expected performance constraints or indicators of the aerospace system time domain performance response such as settling time overshoot steady state error and state amplitude will be directly guaranteed in the control design Moreover this book systematically proposes a series of spacecraft performance guaranteed control algorithms based on the practical situation of the aerospace system For individual spacecraft control algorithms that consider practical problems such as control task requirements settling time constraints transient performance normalization input command constraints and optimization faced by the on orbit spacecraft are proposed to achieve the precise control objectives of the system under constraints and various complex situations For the pre combination and post combination control of multiple spacecraft game algorithms based on performance guarantees are proposed and thoroughly discussed For spacecraft formations control algorithms that consider full state constraints nonlinear uncertainties output feedback and collision avoidance are proposed

This book provides the theoretical basis and simulation experience for scholars and engineers to develop high performance high precision spacecraft control algorithms Furthermore it hopes that these will contribute to the development of the world s aerospace technology Space Operations Young H. Lee,Alexander Schmidt,Ed Trollope,2024-12-13 This book includes a carefully curated selection of contributions that were presented at the 17th International Conference on Space Operations SpaceOps held in Dubai UAE from March 6th to 10th 2023 The selection of chapters was based on their relevance to the current space operations community The contributions represent a cross section of three main subject areas Mission Management management tasks for designing preparing and operating a particular mission Spacecraft Operations preparation and implementation of all activities to operate a space vehicle crewed and uncrewed under all conditions and Ground Operations preparation qualification and operations of a mission dedicated ground segment and infrastructure including antennas control centers and communication means and interfaces The book highlights the SpaceOps Committee s objective to encourage the exchange of technical knowledge regarding space mission operations and ground data systems Additionally it emphasizes the significance of establishing and sustaining a global community of experts in space operations
