Many micronutrients vitamins and minerals have clearly identified roles in supporting the function of cells of the immune system People with micronutrient deficiencies often have immune impairments and are susceptible to infections and to infections being severe even fatal In such individuals micronutrient supplements can reverse immune impairments and reduce the risk of infections Nevertheless the relationships between micronutrient status immunity and infection are complex some micronutrients that are required by the immune system such as iron can also increase the risk of certain infections probably because those micronutrients favor pathogen growth and survival Furthermore the acute phase response to infections alters micronutrient metabolism This makes understanding of the relationship between micronutrient status and infection more complicated COVID 19 increased interest in micronutrients including vitamins C and D and zinc amongst others in the context of immunity and infection but the findings of different studies have been inconsistent highlighting the complexity of this field This Research Topic welcomes manuscript submissions on micronutrients immunity and infection These may be mechanistic studies conducted in controlled settings such as in cell culture or experimental animals human epidemiological studies and trials in human participants and patients evaluating relationships between micronutrient exposure immune outcomes and infection and the underlying mechanisms Report on Carcinogens ,2002 **Minerals Yearbook** ,2005 Critical Mineral Resources of the United States K. J. Schulz,John H. DeYoung,Robert R. Seal,Dwight C. Bradley,2017 As the importance and dependence of specific mineral commodities increase so does concern about their supply The United States is currently 100 percent reliant on foreign sources for 20 mineral commodities and imports the majority of its supply of more than 50 mineral commodities Mineral commodities that have important uses and face potential supply disruption are critical to American economic and national security However a mineral commodity s importance and the nature of its supply chain can change with time a mineral commodity that may not have been considered critical 25 years ago may be critical today and one considered critical today may not be so in the future The U S Geological Survey has produced this volume to describe a select group of mineral commodities currently critical to our economy and security For each mineral commodity covered the authors provide a comprehensive look at 1 the commodity s use 2 the geology and

global distribution of the mineral deposit types that account for the present and possible future supply of the commodity 3 the current status of production reserves and resources in the United States and globally and 4 environmental considerations related to the commodity s production from different types of mineral deposits The volume describes U S critical mineral resources in a global context for no country can be self sufficient for all its mineral commodity needs and the United States will always rely on global mineral commodity supply chains This volume provides the scientific understanding of critical mineral resources required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable supply of mineral commodities Ecological Risk Assessment for Kesterson Reservoir ,2000
